CIRCULAR AND CATALOGUE

OF THE

ALBANY MEDICAL COLLEGE.

1874.

ALBANY:
JOEL MUNSELL.

1874.

n. b.

Trustees.

IRA HARRIS, - - - - - PRESIDENT.
AMASA J. PARKER, - - - - - VICE PRESIDENT.
GEORGE DEXTER, - - - - - TREAS'R AND SEC'Y.

ROBERT H. PRUYN,	THOMAS W. OLCOTT,
BRADFORD R. WOOD,	E. N. POTTER,
HENRY H. MARTIN,	ORLANDO MEADS,
S. H. RANSOM,	JOHN F. RATHBONE,
ISAAC W. VOSBURGH,	GEORGE B. STEELE,
ERASTUS D. PALMER,	CHARLES VAN BENTHUYSEN,
CHARLES B. LANSING,	A. VAN SANTVOORD,
JOSEPH H. RAMSEY,	ALBION RANSOM,
THOMAS McELROY,	CLARENCE RATHBONE,
S. O. SHEPARD,	

MAYOR and RECORDER, *Ex-officio*.

Surators.

PETER McNAUGHTON, M.D., S. H. FREEMAN, M.D.,
A. M. VEDDER, M.D., Schenectady.

Graduates of the College are requested to furnish the Registrar with
their Postoffice address.

P. 14249

Faculty.

ELIPHALET NOTT POTTER, D.D.,

PRESIDENT OF THE UNIVERSITY.

HON. IRA HARRIS, LL.D.,

PRESIDENT OF THE BOARD OF TRUSTEES.

JAMES H. ARMSBY, M.D.,

PRESIDENT OF THE FACULTY,

Prof. of Principles and Practice of Surgery, and Clinical Surgery.

JOHN V. LANSING, M.D.,

REGISTRAR,

Prof. of Theory and Practice of Medicine, and Clinical Medicine.

WILLIAM P. SEYMOUR, M.D., Troy, N. Y.,

Prof. of Obstetrics, and Diseases of Women.

HENRY R. HASKINS, M.D.,

Prof. of Anatomy.

GEORGE T. STEVENS, M.D.,

Prof. of Physiology and Ophthalmology.

MAURICE PERKINS, A.M., M.D., Schenectady, N. Y.,

Prof. of Chemistry and Toxicology.

WILLIS G. TUCKER, M.D.,

Lecturer on Materia Medica and Assistant Prof. of Chemistry.

WILLIAM HAILES, M.D.,

Lecturer on Pathological Anatomy.

HENRY MARCH, M.D.,

Curator of Museum.

O. D. BALL, M. D.,

Demonstrator.

Medical College.

LECTURE TERM BEGINS SEPT. 1, 1874, ENDS DEC. 22, 1874.

The Albany Medical College forms now the Medical Department of Union University. This new relation assumed in 1873, by virtue of appropriate legislative action, and the concurrence of the several Boards of Trustees of the Law and Medical Schools and the Dudley Observatory at Albany, and of Union College at Schenectady, will, it is believed, add to the completeness and efficiency of each of these educational and scientific institutions.

The principle underlying this union is that each institution shall seek "to advance the well being of all, and all to coöperate for the well being of each."

Its legitimate result, so far as regards this College, will be growth, enlarged facilities for instruction, and abundant opportunities for a complete and thorough medical education.

LOCATION.

It is evident that for the successful working of Medical Schools they should be located in large cities. In this respect Albany affords advantages not surpassed by any other city. It is easily accessible by numerous converging railroads; its population numbers nearly 100,000, and its manufacturing establishments are numerous and extensive. In so large and busy a city

there is never any lack of material for the illustration of clinical medicine, surgery or practical anatomy.

HOSPITAL ADVANTAGES.

No medical institution is complete without the facilities which a large hospital affords for the study and observation of disease in all its forms and stages.

The Albany Hospital, the Eye and Ear Infirmary, and the Dispensary are in close proximity to the College, and by regulation of their governing boards, are made available for clinical purposes to all its students.

Three or more Clinical Lectures are given weekly and all the surgical operations of importance are performed before the class in the admirably lighted amphitheatre of the hospital.

The Faculty are well aware of the value of Clinical Instruction to the medical student and endeavor to make this an especial feature of the course.

A large addition has been made during the past year to the Hospital building and it now provides beds for 150 patients. Over 4000 cases were treated at the Dispensary and over 500 cases at the Eye and Ear Infirmary during the past year.

The appointments to positions in the Hospital as house physician and surgeon and assistant and apothecary are annually made and are competed for by members of the graduating class.

COLLEGE BUILDING, MUSEUM, ETC.

The College building, situated on Eagle street, is a fine, large edifice, well appointed in its lecture rooms, chemical laboratory dissecting rooms and library.

The Museum is especially rich in its anatomical preparations. It contains the valuable morbid specimens accumulated by the late Drs. March and McNaughton, and the extensive collections

of Profs. Armsby and Haskins. This Museum is unequalled in the variety and rarity of its Pathological specimens.

Additions are constantly made to it and it is well arranged and classified for study and illustration.

Reference may also be here made to the large collection of wax, papier maché and plaster models contained in the Museum for the illustration of comparative and human anatomy and for pathological studies.

The Library of the College contains nearly 5000 volumes and arrangements are being made for its constant increase. A portion known as the students' department is appropriated for their use during the term.

CHEMICAL AND TOXICOLOGICAL LABORATORY.

The working Laboratory is open during the entire year. Students are received singly or in classes for practical instruction in the various branches of Chemical Analysis and Medical Chemistry. Special opportunities are furnished in this department to those desirous of extending their knowledge in these directions.

The Laboratory is well lighted and conveniently arranged. Each student has a desk and chemicals for his own use, and is supplied with all necessary apparatus. During the lecture course the Laboratory classes are so arranged as not to interfere with the lectures and other college exercises.

PRACTICAL ANATOMY.

Great attention is paid to the study of Anatomy and the utmost efforts are made to keep the dissecting rooms abundantly supplied with material. All legitimate work in this department, such as the making of postmortem examinations — the injection of cadavers for preservation — the injection of minute tissues

for microscopical studies — the mounting of skeletons and the preparation of dry specimens is taught and exhibited under the direction of the Professor in this department, and the Demonstrator.

THE METHOD OF INSTRUCTION.

The aim of the Faculty is to make the course practical, useful and scientific. It does this by combining with didactic lectures, clinical lectures, recitations, practical work in the laboratory and dissecting room and by the examination and diagnosis by students of cases assigned them and by reports and criticisms of the same by the class and the professors.

The study of minute anatomy in the first instance by microscopes is aided by illustrations before the class by means of improved cameras with oxyhydrogen lights. A photographic gallery has recently been erected and furnished, connected with the Hospital, in which specimens of healthy and morbid minute tissues are photographed from nature upon glass and subsequently used for class illustrations. A set of Dr. Woodward's celebrated slides, made at the United States Army Medical Museum, Washington, has been added to the already large collection now in possession of the College.

TEXT BOOKS.

The student is recommended, for the better appreciation of lectures and as forming the nucleus of his future library, to provide himself with at least one good text book in each department; the following are suggested:

SURGERY.— *Gross, Erichsen, Druitt, Holmes, Hamilton.*

ANATOMY.— *Gray, Wilson, Stricker, Green.*

THEORY AND PRACTICE.— *Flint, Roberts, Watson, Niemeyer.*

CHEMISTRY.— *Attfield, Bloxam, Cooke, Odling.*

MATERIA MEDICA.— *Ringer, Stillé, Headland, Biddle, U. S. Dispensatory.*

OBSTETRICS.— *Hodge, Caseaux, Byford.*

DISEASES OF WOMEN.— *Thomas, Peaslee, Hewitt, Wells.*

DISEASES OF NERVOUS SYSTEM.— *Clymer, Mitchell, Jackson.*

PHYSIOLOGY.— *Dalton, Marshall, Huxley.*

MEDICAL JURISPRUDENCE.— *Taylor, Wharton & Stillé.*

FEES AND REGULATIONS.

The matriculation fee is \$5.00. The fee for a full course of one year, \$100. Perpetual ticket \$150. Demonstrator's ticket \$5. Laboratory ticket \$10.

The graduation fee is \$25, which must be paid to the Registrar before the candidate can be admitted to an examination.

Students are requested to register their names in the *album* of the College, and take out the tickets, with as little delay as possible after their arrival in the city.

Students who have attended two full courses of lectures at other medical institutions will be required to pay \$25, and the matriculation fee.

Students who have attended two full courses of lectures at this College will be required to pay only the matriculation fee.

Graduates of this institution have perpetual free admission. Graduates of other medical schools will be admitted by paying the matriculation fee.

REQUIREMENTS FOR GRADUATION.

The candidate must be twenty-one years of age, and exhibit certificates from a physician or surgeon, duly authorized by law to practice his profession, that he has studied medicine and surgery under his instructions during a term of three years.

He must have attended two full courses of lectures, one of which must have been at this institution.

He must be of good moral character.

He must deliver to the Registrar, six weeks before the end of the term, a Thesis, written by himself, on some medical subject, and be prepared to defend it at his examination.

He must pass a satisfactory examination in the several branches of medicine and surgery.

Final examinations will be conducted chiefly in writing, by a series of questions on the different branches taught, and are intended to be thorough but just to the student.

Regular and punctual attendance is required, and certificates of actual attendance, only, given at the end of the term.

PRIZES.

Two prizes have been instituted during the present year and are hereby announced as follows :

I. The Alumni Association Prize of thirty dollars founded by the President of the Association for the best Anatomical or Surgical preparation, to be deposited in the Museum of the College. This prize is open for competition to any student of the College.

II. The Faculty Prize of thirty dollars for the best thesis, by any member of the graduating class.

The Faculty and Curators and the President of the Alumni Association are the Committee to decide in the matter of the above prizes.

LECTURE TERMS.

The regular term or course of lectures in the Albany Medical College begins on the first Tuesday of September in each year and continues sixteen weeks.

Five or more lectures are given daily during the term with the exception of Saturdays and Sundays. Medical and Ophthalmic Cliniques are held each Wednesday at the Hospital and a general Surgical Clinique each Saturday morning.

SPRING TERM.

For the purpose of affording students still greater facilities and increased opportunities for the study of medicine, the Faculty announce that they have instituted a spring course of lectures at the College and Hospital to begin on the first Tuesday of March and to continue eight weeks.

Two or more lectures will be given daily and the usual cliniques will be continued. Attendance upon this spring term is optional with the student. Those not holding perpetual tickets will be required to pay a fee of \$5, which is intended to meet the incidental expenses attending the same. Laboratory and dissecting room studies can be pursued with great advantage during the spring term and special subjects of a practical character which could not well be introduced in the regular course will be treated of and studied.

It is believed that the spring course hereby announced will be profitable to the student.

EXPENSES OF LIVING.

The expenses of living in Albany are about the same as in other cities of equal size ; good board can be obtained at from \$4 to \$6 per week, other expenses must of course depend upon the habits of the student.

JOHN V. LANSING, M.D.,

Registrar,

Albany, N. Y.

July, 1874.

Students of 1873.

ANNUAL CIRCULAR.

1875.

The next Spring Term begins April 4, 1876.

The next Fall Term begins September 5, 1876.

The Albany Medical College forms now the Medical Department of Union University. This new relation assumed in 1873, by virtue of appropriate legislative action, and the concurrence of the several Boards of Trustees of the Law and Medical Schools and the Dudley Observatory at Albany, and of Union College at Schenectady, will, it is believed, add to the completeness and efficiency of each of these educational and scientific institutions.

LOCATION.

It is evident that for the successful working of Medical Schools they should be located in large cities. In this respect Albany affords advantages not surpassed by any other city. It is easily accessible by numerous converging rail roads: its population numbers nearly 100,000, and its manufacturing establishments are numerous and extensive. In so large and busy a city there is never any lack of material for the illustration of Clinical medicine, surgery or practical anatomy.

HOSPITAL ADVANTAGES.

No medical institution is complete without the facilities which a large hospital affords for the study and observation of disease in all its forms and stages.

The Albany Hospital, the Eye and Ear Infirmary, and the Dispensary are in close proximity to the College, and by regulation of their governing boards, are made available for clinical purposes to all its students.

Three or more Clinical Lectures are given weekly and all the surgical operations of importance are performed before the class in the admirably lighted amphitheatre of the hospital.

The Faculty are well aware of the value of Clinical Instruction to the medical student and endeavor to make this an especial feature of the course.

COLLEGE BUILDING, MUSEUM, ETC.

The College building, situated on Eagle street, is a fine, large edifice, well appointed in its lecture rooms, chemical laboratory, dissecting room and library.

The Museum is especially rich in its anatomical preparations. It contains the valuable morbid specimens accumulated by the late Drs. March and McNaughton, and the extensive collections of Profs. Armsby and Haskins. This Museum is unequalled in the variety and rarity of its Pathological specimens.

Reference may also be here made to the large collection of wax papier maché and plaster models contained in the Museum, for the illustration of comparative and human anatomy and for pathological studies.

The Library of the College contains nearly 5000 volumes and arrangements are being made for its constant increase. A portion known as the student's department is appropriated for their use during the term.

CHEMICAL AND TOXICOLOGICAL LABORATORY.

The working Laboratory is open during the entire year. Students are received singly or in classes for practical instruction in the various branches of Chemical Analysis and Medical Chemistry. Special opportunities are furnished in this department to those desirous of extending their knowledge in these directions.

PRACTICAL ANATOMY.

Great attention is paid to the study of Anatomy and the utmost efforts are made to keep the dissecting rooms abundantly supplied with material. All legitimate work in this department, such as the making of postmortem examinations — the injection of cadavers for preservation — the injection of minute tissues for microscopical studies — the mounting of skeletons and the preparation of dry specimens, is taught and exhibited under the direction of the Professor in this department, and the Demonstrator.

THE METHOD OF INSTRUCTION.

The aim of the Faculty is to make the course practical, useful and scientific. It does this by combining with didactic lectures, clinical lectures, recitations, practical work in the laboratory and dissecting room and by the examination and diagnosis by students of cases assigned them and by reports and criticisms of the same by the class and the professors.

FEEES AND REGULATIONS.

The matriculation fee is \$5. The fee for a full course of one year. \$100. Perpetual ticket \$150. Demonstrator's ticket \$5. Laboratory ticket \$10.

The graduation fee is \$25, which must be paid to the Registrar before the candidate can be admitted to an examination.

Students are requested to register their names in the *album* of the College, and take out the tickets, with as little delay as possible after their arrival in the city.

Students who have attended two full courses of lectures at other medical institutions will be required to pay \$25, and the matriculation fee.

Students who have attended two full courses of lectures at this College will be required to pay only the matriculation fee.

Graduates of this institution have perpetual free admission. Graduates of other medical schools will be admitted by paying the matriculation fee.

REQUIREMENTS FOR ADMISSION.

On and after September 1, 1876, all students entering this institution will be required to pass an examination equivalent to the academical examination of the Board of Regents of the State of New York, or to show a certificate of attendance upon or graduation from some High School or Academy under control of that Board. The examination will be conducted both orally and in writing.

Graduates from recognized Colleges, Scientific Schools or Medical Institutions, will not be required to pass this examination on joining the school.

REQUIREMENTS FOR GRADUATION.

The candidate must be twenty-one years of age, and exhibit certificates from a physician or surgeon, duly authorized by law to practice his profession, that he has studied medicine and surgery under his instructions during a term of three years.

He must have attended two full courses of lectures, one of which must have been at this institution.

He must be of good moral character.

He must deliver to the Registrar, six weeks before the end of the term, a Thesis, written by himself, on some medical subject, and be prepared to defend it at his examination.

He must pass a satisfactory examination in the several branches of medicine and surgery.

Final examinations will be conducted chiefly in writing, by a series of questions on the different branches taught, and are intended to be thorough but just to the student.

Regular and punctual attendance is required, and certificates of actual attendance, only, given at the end of the term.

PRIZES.

Three prizes have been instituted and are hereby announced :

I. The Alumni Association Prize of thirty dollars in gold, founded by Prof. Henry D. Didama, Ex-President of the Association, for the

best Anatomical or Surgical preparation, to be deposited in the Museum of the College. This prize is open for competition to any student of the College.

II. The Faculty Prize of twenty-five dollars, in gold, to be awarded to the student who shall stand highest in the general examination for graduation.

III. The Curator's Prize of twenty dollars, in gold, for the best Thesis by any member of the graduating class.

The Faculty and Curators and the President of the Alumni Association are the Committee to decide in the matter of the above prizes.

SPRING TERM.

A spring course of lectures will begin on the first Tuesday of April next and continue eight weeks.

Two or more lectures will be given daily and the usual Wednesday, Friday and Saturday clinics will be continued. Attendance upon this spring term is optional with the student. Those not holding term tickets will be required to pay a fee of \$5, which is intended to meet the incidental expenses attending the same. Laboratory and dissecting room studies can be pursued with great advantage during the spring term and special subjects of a practical character which could not well be introduced in the regular course will be treated of and studied.

LECTURE TERMS.

The regular term or course of lectures in the Albany Medical College begins on the first Tuesday of September in each year and continues sixteen weeks.

Five or more lectures are given daily during the term with the exception of Saturdays and Sundays. Medical and Ophthalmic Clinics are held each Wednesday and Friday at the Hospital and a general Surgical clinic each Saturday morning.

EXPENSES OF LIVING.

The expenses of living in Albany are about the same as in other cities of equal size; good board can be obtained at from \$4 to \$6 per week. Other expenses must of course depend upon the habits of the student.

OF THE

ALBANY MEDICAL COLLEGE.

OFFICERS FOR 1875.

PRESIDENT — DR. JOHN H. BEECH, Coldwater, Mich. ('41).

VICE-PRESIDENTS — DR. ALSON D. HULL, New York City ('41); DR. BARENT A. MYNDERSE, Schenectady, N. Y. ('53); DR. ALEXANDER SHILAND, West Troy, N. Y. ('53); DR. SOLOMON VAN ETTEN, Port Jervis, N. Y. ('53); DR. CHARLES L. SPENCER, New Bedford, Mass. ('57).

SECRETARY — DR. WILLIS G. TUCKER, Albany, N. Y. ('70).

TREASURER — DR. GEBHARD L. ULLMAN, Albany, N. Y. ('71).

EXECUTIVE COMMITTEE — DR. HENRY D. DIDAMA, Syracuse, N. Y. ('46); DR. WILLIAM S. YOUNG, Johnstown, N. Y. ('41); DR. JAMES H. SCOON, Amsterdam, N. Y. ('49); DR. JAMES S. BAILEY, Albany, N. Y. ('53); DR. MATTHEW H. BURTON, Troy, N. Y. ('53); DR. JOHN H. HILL, Quaker Street, N. Y. ('53); DR. CHARLES H. BURBECK, Centre Brunswick, N. Y. ('59); DR. ANTHONY P. TEN EYCK, DeFreestville, N. Y. ('66); DR. JOSEPH H. BLATNER, Albany, N. Y. ('72); DR. OSCAR MYERS, Bay Ridge, N. Y. ('73).

Graduates are particularly requested to send their own addresses, together with those of other graduates with whom they may be acquainted, to the Secretary, and to keep him informed of any change in their place of residence. The yearly dues are fixed at one dollar. This should be sent to Dr. G. L. Ullman, Treasurer, No. 95 Central avenue, Albany, N. Y.

The next meeting of the Association will take place on Thursday, Dec. 23d. Due notice has been given of this meeting through the mail.

ANNUAL CIRCULAR.

1875.

Lecture Term begins September 6, 1876, and continues 20 weeks.

The Albany Medical College forms now the Medical Department of Union University. This new relation assumed in 1873, by virtue of appropriate legislative action, and the concurrence of the several Boards of Trustees of the Law and Medical Schools and the Dudley Observatory at Albany, and of Union College at Schenectady, will, it is believed, add to the completeness and efficiency of each of these educational and scientific institutions.

LOCATION.

It is evident that for the successful working of Medical Schools they should be located in large cities. In this respect Albany affords advantages not surpassed by any other city. It is easily accessible by numerous converging rail roads: its population numbers nearly 100,000, and its manufacturing establishments are numerous and extensive. In so large and busy a city there is never any lack of material for the illustration of clinical medicine, surgery or practical anatomy.

HOSPITAL ADVANTAGES.

No medical institution is complete without the facilities which large hospitals afford for the study and observation of disease in all its forms and stages.

The Albany Hospital and St. Peter's Hospital, together with the Eye and Ear Infirmary and the Dispensaries connected with each, are, by the regulations of their governing boards, made available for clinical purposes to all its students.

Three or more Clinical Lectures are given weekly and all the surgical operations of importance are performed before the class in the admirably lighted amphitheatre of the hospital.

The Faculty are well aware of the value of Clinical Instruction to the medical student and endeavor to make this an especial feature of the course.

The appointments to positions in the Hospital as house physician and surgeon and apothecary are annually made and are competed for by members of the graduating class.

COLLEGE BUILDING, MUSEUM, ETC.

The College building, situated on Eagle street, is a fine, large edifice, well appointed in its lecture rooms, chemical laboratory, dissecting room and library.

The Museum is especially rich in its anatomical preparations. It contains the valuable morbid specimens accumulated by the late Drs. March, McNaughton, and Armsby. This Museum is unequalled in the variety and rarity of its Pathological specimens.

Reference may also be here made to the large collection of wax, papier maché and plaster models contained in the Museum, for the illustration of comparative and human anatomy and for pathological studies.

The Library of the College contains nearly 5000 volumes and arrangements are being made for its constant increase. A portion known as the student's department is appropriated for their use during the term.

CHEMICAL AND TOXICOLOGICAL LABORATORY.

The working Laboratory is open during the entire year. Students are received singly or in classes for practical instruction in the various branches of Chemical Analysis and Medical Chemistry. Special opportunities are furnished in this department to those desirous of extending their knowledge in these directions.

The Laboratory is well lighted and conveniently arranged. Each student has a desk and chemicals for his own use, and is supplied with all necessary apparatus. During the lecture course the Laboratory classes are so arranged as not to interfere with the lectures and other college exercises.

PRACTICAL ANATOMY.

Great attention is paid to the study of Anatomy and the utmost efforts are made to keep the dissecting rooms abundantly supplied with material. All legitimate work in this department, such as the making of post mortem examinations — the injection of cadavers for preservation — the injection of minute tissues for microscopical studies — the mounting of skeletons and the preparation of dry specimens, is taught and exhibited under the direction of the Professor in this department, and the Demonstrator.

THE METHOD OF INSTRUCTION.

The aim of the Faculty is to make the course practical, useful and scientific. It does this by combining with didactic lectures, clinical

lectures, recitations, practical work in the laboratory and dissecting room, and by the examination and diagnosis by students of cases assigned them, and by reports and criticisms of the same by the class and the professors.

The study of minute anatomy, in the first instance by microscopes, is aided by illustrations before the class by means of improved cameras with oxyhydrogen lights. A photographic gallery has recently been erected and furnished, connected with the hospital, in which specimens of healthy and morbid minute tissues are photographed upon glass and subsequently used for class illustrations. A set of Dr. Woodward's celebrated slides, made at the United States Army Medical Museum, Washington, has been added to the already large collections now in possession of the college.

TEXT BOOKS.

The student is recommended, for the better appreciation of lectures and as forming the nucleus of his future library, to provide himself with at least one good text book in each department; the following are suggested:

SURGERY.—*Gross, Erichsen, Bryant, Holmes, Billroth.*

THEORY AND PRACTICE.—*Flint, Roberts, Watson, Niemeyer.*

PSYCHOLOGICAL MEDICINE.—*Greisenger, Bucknill & Luke, Blanford.*

ANATOMY.—*Gray, Wilson, Holden, Holden's Osteology, Sharpey & Quain.*

OBSTETRICS.—*Hodge, Caseaux, Byford.*

MATERIA MEDICA.—*G. B. Wood, Stillé, Ringer, Biddle, U. S. Dispensatory.*

CHEMISTRY — *Attfield, Bloxam, Cooke, Fownes, Craft.*

DISEASES OF WOMEN.—*Thomas, Peaslee, Hewitt, Wells.*

DISEASES OF NERVOUS SYSTEM.—*Clymer, Mitchell, Jackson.*

PHYSIOLOGY.—*Dalton, Marshall, Huxley, Flint.*

MEDICAL JURISPRUDENCE AND HYGIENE.—*Ordronaux, Beck, Taylor, Parke's Practical Hygiene.*

PATHOLOGICAL ANATOMY AND HISTOLOGY.—*Green, Wagner, Stricker, Frey.*

OPHTHALMOLOGY.—*Wells, Stellwag.*

FEES AND REGULATIONS.

The matriculation fee is \$5. The fee for a full course of one year, \$100. Perpetual ticket \$150. Demonstrator's ticket \$5. Laboratory ticket \$10.

The graduation fee is \$25, which must be paid to the Registrar before the candidate can be admitted to an examination.

Students are requested to register their names in the *album* of the College, and take out the tickets, with as little delay as possible after their arrival in the city.

Students who have attended two full courses of lectures at other medical institutions will be required to pay \$25, and the matriculation fee.

Students who have attended two full courses of lectures at this College will be required to pay only the matriculation fee.

Graduates of this institution have perpetual free admission. Graduates of other medical schools will be admitted by paying the matriculation fee.

REQUIREMENTS FOR ADMISSION.

On and after September 1, 1876, all students entering this institution will be required to pass a preliminary examination. The examination will be conducted both orally and in writing.

Graduates from recognized Colleges, Scientific Schools or Medical Institutions, will not be required to pass this examination on joining the school.

REQUIREMENTS FOR GRADUATION.

The candidate must be twenty-one years of age, and exhibit certificates from a physician or surgeon, duly authorized by law to practice his profession, that he has studied medicine and surgery under his instruction during a term of three years.

He must have attended two full courses of lectures, one of which must have been at this institution.

He must be of good moral character.

He must deliver to the Registrar, six weeks before the end of the term, a Thesis, written by himself, on some medical subject, and be prepared to defend it at his examination.

He must pass a satisfactory examination in the several branches of medicine and surgery.

Students who have attended two full courses of lectures on Anatomy, Physiology, Materia Medica and Chemistry may be examined on those subjects, and, if giving satisfactory evidence of proficiency in them, will be examined only on the other branches at the end of their third course.

Final examinations will be conducted chiefly in writing, by a series of questions on the different branches taught, and are intended to be thorough but just to the student.

Regular and punctual attendance is required, and certificates of actual attendance, only, given at the end of the term.

PRIZES.

Three prizes have been instituted and are hereby announced :

I. The Alumni Association Prize of thirty dollars in gold, founded by Prof. Henry D. Didama, Ex-President of the Association, for the best Anatomical or Surgical preparation, to be deposited in the Mu-

seum of the College. This prize is open for competition to any student of the College.

II. The Faculty Prize of twenty-five dollars, in gold, to be awarded to the student who shall stand highest in the general examination for graduation.

III. The Curator's Prize of twenty dollars, in gold, for the best Thesis by any member of the graduating class.

The Faculty and Curators and the President of the Alumni Association are the Committee to decide in the matter of the above prizes.

LECTURE TERMS.

The regular term or course of lectures in the Albany Medical College begins on the first Tuesday of September in each year and continues twenty weeks.

Five or more lectures are given daily during the term with the exception of Saturdays and Sundays.

CLINICS.

Medical and Ophthalmic Clinics will be held each Wednesday and Friday at the Albany Hospital at 11 A.M. Surgical Clinics will be held at the Albany Hospital, Saturdays at 11 A.M., and at St. Peter's Hospital, Wednesdays at 1:30 P.M.

SPRING TERM.

A spring course of lectures will begin on the first Tuesday of April next and continue eight weeks.

Two or more lectures will be given daily and the usual Wednesday, Friday and Saturday clinics will be continued. Attendance upon this spring term is optional with the student. Those not holding term tickets will be required to pay a fee of \$5, which is intended to meet the incidental expenses attending the same. Laboratory and dissecting room studies can be pursued with great advantage during the spring term and special subjects of a practical character, which could not well be introduced in the regular course, will be treated of and studied.

EXPENSES OF LIVING.

The expenses of living in Albany are about the same as in other cities of equal size; good board can be obtained at from \$4 to \$6 per week. Other expenses must of course depend upon the habits of the student.

JACOB S. MOSHER, M.D.,
Registrar,
Albany, N. Y.

June 1, 1876.

Association of the Alumni

OF THE

ALBANY MEDICAL COLLEGE.

Officers for 1876.

PRESIDENT.—DR. PHINEAS H. STRONG, Buffalo, N. Y. ('39.)

VICE-PRESIDENTS.—DR. RICHARD T. STEVENS, New York City ('41); DR. SAMUEL H. FREEMAN, Albany, N. Y. ('46); DR. WILSON T. BASSETT, Cooperstown, N. Y. ('44); DR. W. H. SNYDER, Troy, N. Y. ('39); DR. DANIEL G. DODGE, Rouses Point, N. Y. ('49).

SECRETARY.—DR. WILLIS G. TUCKER, Albany, N. Y. ('70).

TREASURER.—DR. GERHARD L. ULLMAN, Albany, N. Y. ('71).

EXECUTIVE COMMITTEE.—DR. WM. H. BAILEY, Albany, N. Y. ('53); DR. LEVI MOORE, Albany, N. Y. ('51); DR. WM. H. MURRAY, Albany, N. Y. ('69); DR. WM. HAILES, Albany, N. Y. ('70); DR. JNO. B. STONEHOUSE, Albany, N. Y. ('71); DR. MARVIN R. PECK, Glen's Falls, N. Y. ('51); DR. JOSEPH C. GREEN, Buffalo, N. Y. ('55); DR. LEROY MCLEAN, Troy, N. Y. ('55); DR. B. RUSH HOLCOMB, Whitehall, N. Y. ('64); DR. CHARLES E. WHITEBECK, Cohoes, N. Y. ('66).

Graduates are particularly requested to send their own addresses, together with those of other graduates with whom they may be acquainted, to the Secretary, and to keep him informed of any change in their place of residence. The yearly dues are fixed at one dollar. This should be sent to Dr. G. L. Ullman, Treasurer, No. 71 Central avenue, Albany, N. Y.

The next annual meeting of the Association will take place at the close of the fall lecture term. Due notice will be given of this meeting through the mails.

PHINEAS H. STRONG, M.D.,
President.

WILLIS G. TUCKER, M.D.,
Secretary, Albany Medical College, Albany, N. Y.

Union University.

SCHOOL OF CIVIL ENGINEERING

OF

UNION COLLEGE, SCHENECTADY, N. Y.

The object of this Department, which was organized in UNION COLLEGE in 1845, is to give its Students such instruction in the Theory and Practice of CIVIL ENGINEERING as to qualify them for immediate usefulness in the field and office in subordinate relations, and at the same time to fit them to fill satisfactorily the higher positions in the profession after a moderate amount of experience in the routine of practice.

The thoroughness and completeness of the course of instruction, the unsurpassed excellence of its illustrative apparatus, the opportunities and arrangements for field practice, the moderate charges (\$25 per term), and the fact that Students have access without further charge to the teachings of the other Departments, commend the course to those contemplating the Engineering profession.

For circulars, or for specific information, address

PROF. CADY STALEY or
PRESIDENT E. N. POTTER, D.D.

DUDLEY OBSERVATORY, ALBANY.

THE PRESIDENT OF THE UNION UNIVERSITY will receive and acknowledge communications.

CRAIG, Albany ('52); DR. HENRY S. CASE, Albany ('53); DR. ROBERT H. SABIN, West Troy, N. Y. ('56); DR. JOHN U. HAYNES, Cohoes, N. Y. ('72); DR. LINZIE T. MORRILL, Albany ('73); DR. WILLIAM M. PURPLE, Albany ('75).

Graduates are particularly requested to send their own addresses, together with those of other graduates with whom they may be acquainted, to the Secretary, and to keep him informed of any change in their place of residence. The yearly dues are fixed at one dollar. This should be sent to Dr. G. L. Ullman, Treasurer, No. 71 Central avenue, Albany, N. Y.

The next annual meeting of the Association will take place at the close of the fall lecture term. Due notice will be given of this meeting through the mails.

RICHARD T. STEVENS, M.D.,
President.

WILLIS G. TUCKER, M.D.,
Secretary, Albany Medical College, Albany, N. Y.

ALBANY MEDICAL COLLEGE.

Medical Department of Union University.

ANNUAL ANNOUNCEMENT.

ALBANY:
JOEL MUNSELL.
1877.

FACULTY OF MEDICINE.

ELIPHALET NOTT POTTER, D.D.,

PRESIDENT OF THE UNIVERSITY.

AMASA J. PARKER, LL.D.,

PRESIDENT OF THE BOARD OF TRUSTEES.

THOMAS HUN, M.D.,

*Dean of the Faculty, and Emeritus Professor of the Institutes of
Medicine.*

S. O. VANDER POEL, M.D.,

Professor of Theory and Practice, and Clinical Medicine.

JOHN SWINBURNE, M.D.,

Professor of Fractures and Dislocations and Clinical Surgery.

ALBERT VAN DERVEER, M.D.,

Professor of the Principles and Practice of Surgery.

JACOB S. MOSHER, M.D.,

Registrar, and Professor of Medical Jurisprudence and Hygiene.

MAURICE PERKINS, M.D.,

Professor of Chemical Philosophy and Organic Chemistry.

JOHN M. BIGELOW, M.D.,

Professor of Materia Medica and Therapeutics.

LEWIS BALCH, M.D.,

Professor of Anatomy.

SAMUEL B. WARD, M.D.,

Professor of Surgical Pathology and Operative Surgery.

JOHN P. GRAY, M.D., LL.D.,

Professor of Psychological Medicine.

EDWARD R. HUN, M.D.,

Professor of Diseases of the Nervous System.

JAMES P. BOYD, JR., M.D.,

Professor of Obstetrics and Diseases of Women and Children.

WILLIS G. TUCKER, M.D.,

Professor of Inorganic and Analytical Chemistry.

WILLIAM HAILES, M.D.,

Anthony Professor of Histology and Pathological Anatomy.

CYRUS S. MERRILL, M.D.,

Professor of Ophthalmology.

HARRISON E. WEBSTER, A.M.,

Lecturer on Physiology.

HENRY MARCH, M.D.,

Curator of the Museum.

EUGENE VAN SLYKE, M.D.,

Demonstrator of Anatomy.

MATRICULANTS FOR 1876-7.

BALDWIN, DORMAN,.....	N.Y.,	<i>Dr. J. T. Owen.</i>

ANNUAL CIRCULAR.

1877.

Lecture Term begins September 4th, 1877, and continues 20 weeks.

The Albany Medical College forms now the Medical Department of Union University. This new relation assumed in 1873, by virtue of appropriate legislative action, and the concurrence of the several Boards of Trustees of the Law and Medical Schools and the Dudley Observatory at Albany, and of Union College at Schenectady, will, it is believed, add to the completeness and efficiency of each of these educational and scientific institutions.

LOCATION.

It is evident that for the successful working of Medical Schools they should be located in large cities. In this respect Albany affords advantages not surpassed by any other city. It is easily accessible by numerous converging rail roads; its population numbers nearly 100,000, and its manufacturing establishments are numerous and extensive. In so large and busy a city there is never any lack of material for the illustration of clinical medicine, surgery or practical anatomy.

HOSPITAL ADVANTAGES.

No medical institution is complete without the facilities which large hospitals afford for the study and observation of disease in all its forms and stages.

The Albany Hospital and St. Peter's Hospital, together with the Eye and Ear Infirmary and the Dispensaries connected with each, are, by the regulations of their governing boards, made available for clinical purposes to all its students.

Three or more Clinical Lectures are given weekly and all the surgical operations of importance are performed before the class in the admirably lighted amphitheatre of the hospital.

The Faculty are well aware of the value of Clinical Instruction to the medical student and endeavor to make this an especial feature of the course.

The appointments to positions in the Hospital as house physician and surgeon and apothecary are annually made and are competed for by members of the graduating class.

COLLEGE BUILDING, MUSEUM, ETC.

The College building, situated on Eagle street, is a fine, large edifice well appointed in its lecture rooms, chemical laboratory, dissecting room and library.

The Museum is especially rich in its anatomical preparations. It contains the valuable morbid specimens accumulated by the late Drs. March, McNaughton, and Armsby. This Museum is unequalled in the variety and rarity of its pathological specimens.

Reference may also be here made to the large collection of wax, papier maché and plaster models contained in the Museum, for the illustration of comparative and human anatomy and for pathological studies.

The Library of the College contains nearly 5000 volumes and arrangements are being made for its constant increase. A portion known as the student's department is appropriated for their use during the term.

CHEMICAL AND TOXICOLOGICAL LABORATORY.

The working Laboratory is open during the entire year. Students are received singly or in classes for practical instruction in the various branches of Chemical Analysis and Medical Chemistry. Special opportunities are furnished in this department to those desirous of extending their knowledge in these directions.

The Laboratory is well lighted and conveniently arranged. Each student has a desk and chemicals for his own use, and is supplied with all necessary apparatus. During the lecture course the Laboratory classes are so arranged as not to interfere with the lectures and other college exercises.

PRACTICAL ANATOMY.

Great attention is paid to the study of Anatomy and the dissecting rooms are kept abundantly supplied with material. All legitimate work in this department, such as the making of post mortem examinations—the injection of cadavers for preservation—the injection of minute tissues for microscopical studies—the mounting of skeletons and the preparation of dry specimens, is taught and exhibited under the direction of the Professor in this department and the Demonstrator.

THE METHOD OF INSTRUCTION.

The aim of the Faculty is to make the course practical, useful and scientific. It does this by combining with didactic lectures, clinical

lectures, recitations, practical work in the laboratory and dissecting room, and by the examination and diagnosis by students of cases assigned them, and by reports and criticisms of the same by the class and the professors.

The study of minute anatomy, in the first instance by microscopes, is aided by illustrations before the class by means of improved cameras with oxyhydrogen lights. A photographic gallery has recently been erected and furnished, connected with the hospital, in which specimens of healthy and morbid minute tissues are photographed upon glass and subsequently used for class illustrations. A set of Dr. Woodward's celebrated slides, made at the United States Army Medical Museum, Washington, has been added to the already large collections now in possession of the college.

HISTOLOGICAL LABORATORY COURSE.

LESSON 1.—FRESH HUMAN BLOOD, Examine 1st. Red corpuscles; 2d. White corpuscles; 3d. With Strickers warm stage; 4th. For blood crystals; Chloro-hæmatine; Hæmatine; Hæma-globine.

LESSONS 2.—CONNECTIVE TISSUE; 1st. From thigh of frog. ELASTIC TISSUE; 1st. From ligamentum nuchæ; 2d. Middle coat of artery. FIBROUS TISSUE; 1st. From tendo Achilles; 2d. From the rat's tail. These are to be prepared; 2d. In teased preparations; 2d. In sections, longitudinal and transverse.

LESSON 3.—ADIPOSE TISSUE; 1st. Isolated; 2d. in mesentery; 3d. In sections (stained); 4th. Treated with æther. CARTILAGE; 1st. Sections (stained); 2d. Boiled, to show cell territory. FIBRO-CARTILAGE; 1st. From the ear; 2d. From the epiglottis.

LESSON 4.—BONE (from the sheep or calf); 1st. Longitudinal; 2d. Transverse; 3d. With the periosteum attached. TEETH; 1st. Longitudinal; 2d. Transverse; 3d. The bats jaw.

LESSON 5.—VOLUNTARY MUSCULAR FIBRE; 1st. Teased; 2d. Sections; Transverse and longitudinal; 3d. Bowman's disks, shown by means of dilute HCl or gastric juice; 4th. Injected; 5th. From the heart. INVOLUNTARY MUSCULAR FIBRE; 1st. From bladder and stomach of frog; 2d. From the middle coat of an artery; 3d. From uterus.

LESSON 6.—MEDULLATED NERVE FIBRE; 1st. Teased; 2d. Section, transverse and longitudinal; 3d. Treated with osmic acid; 4th. With collodion; 5th. From the vagus nerve. NON-MEDULLATED or ganglionic nerve cell obtained from spinal cord. Sections of spinal cord.

LESSON 7.—ARTERIES; transverse. VEINS; transverse. SKIN; 1st. From finger; 2d. From axilla; 3d. From eye-lids. HAIR; 1st. From scalp; 2d. From pubis. NAILS; Sections longitudinal and transverse; (from newly born infant.)

LESSON 8.—DIGESTIVE TRACT. Tongue; 1st. papillæ; 2d. Taste bulbs; Salivary glands. Oesophagus; Transverse section (stained). Stomach; 1st. Cardiac end; 2d. Pyloric end (From man; dog; frog). Duodenum; Brunner's glands. Ileum; Peyer's patches. Cæcum; Solitary glands.

LESSON 9.—LIVER.—Section 1st. Portal vein injected. 2d. Portal and hepatic veins injected.

LESSON 10.—KIDNEY.—Section 1st. Renal artery injected. 2d. Renal artery and vein injected.

LESSON 11.—RESPIRATORY TRACT; 1st. Larynx; 2d. Trachea; 3d. Lungs: Sections of Bronchii, infundibuli and alveoli.

LESSON 12.—EYE; 1st. Cornea; 2d. Ciliary Body; 3d. Choroid. 4th. retina.

SPECIAL COURSE IN EPITHELIUM, ENDOTHELIUM AND LYMPHATICS. 1. Epithelium; 2d. Web of frog's foot; 3d. Cornea; 4th. Isolated; 5th. Peritoneum; 6th. Deep lymph sac; 7th. Endothelia of arteries and veins and lymphatics; 8th. Lymphatics of diaphragm (guinea pig, rabbit or kitten); 9th. Lymphatic plexus in frog's rectum, capillaries injected. 10th. Peri-Lymphatic spaces of His. 11th. Puncture (ein steck) method for lymphatics.

PATHOLOGICAL LABORATORY COURSE.

LESSON 1. — ATROPHY (simple and numerical); DEGENERATIONS Fatty; Muroid; Colloid; Amyloid; Calcareous; Pigmentary.

LESSON 2. — FIBROMATA and MYXOMATA.

LESSON 3. — LIPOMATA and LYMPHOMATA.

LESSON 4. — ENCHONDROMATA and OSTEOMATA.

LESSON 5. — PAPILLOMATA and ADENOMATA.

LESSON 6. — MYOMATA, NEUROMATA and ANGIOMATA.

LESSON 7.—INFLAMMATION; General anatomy of; 2. Conheim's experiment in Mesentery of frog; 3. Suppurative Inflammation; 4. Interstitial; 5. Cirrhosis.

LESSON 8. — INFLAMMATION OF KIDNEY; Suppurative; Tubal Interstitial nephritis.

LESSON 9. — PNEUMONIA; Catarrhal; Croupous; Interstitial.

LESSON 10 — PULMONARY PHthisis; TUBERCLE.

LESSON 11. — INFLAMMATION OF BRAIN AND SPINAL CORD; Acute softening; Sclerosis.

LESSON 12.—SARCOMA; Spindle celled; Melanotic; Osteoid; Round celled; Myeloid.

LESSON 13.—CARCINOMATA; Schirtus: Encephaloid; Colloid; Epithelioma.

TEXT BOOKS.

The student is recommended, for the better appreciation of lectures and as forming the nucleus of his future library, to provide himself with at least one good text book in each department; the following are suggested:

SURGERY.—*Gross, Erichsen, Bryant, Holmes, Billroth.*

THEORY AND PRACTICE.—*Flint, Roberts, Watson, Niemeyer.*

PSYCHOLOGICAL MEDICINE.—*Griesenger, Bucknill & Tuke, Blanford.*

ANATOMY.—*Gray, Wilson, Holden, Holden's Osteology, Sharpey & Quain.*

OBSTETRICS AND DISEASES OF WOMEN.—*Cazeaux, Thomas, Peaslee,*

MATERIA MEDICA.—*G. B. Wood, Stillé, Ringer, Bartholow, U.S. Dispensatory, Headland.*

CHEMISTRY.—*Attfield, Bloxam, Cooke, Fownes, Craft.*

DISEASES OF NERVOUS SYSTEM.—*Clymer, Mitchell, Jackson.*

PHYSIOLOGY.—*Dulton, Marshall, Huxley, Flint.*

MEDICAL JURISPRUDENCE AND HYGIENE.—*Ordranax, Beck, Taylor, Parke's Practical Hygiene.*

PATHOLOGICAL ANATOMY AND HISTOLOGY.—*Wagner, Green, Stricker, Frey.*

OPHTHALMOLOGY.—*Wells, Stellweg.*

FEES AND REGULATIONS.

The matriculation fee is \$5. The fee for a full course of one year, \$100. Perpetual ticket, \$150. Demonstrator's ticket, \$5. Laboratory ticket, \$10.

The graduation fee is \$25, which must be paid to the Registrar before the candidate can be admitted to an examination.

Students are requested to register their names in the *album* of the College, and take out the tickets, with as little delay as possible after their arrival in the city.

Students who have attended two full courses of lectures at other medical institutions will be required to pay \$25, and the matriculation fee.

Students who have attended two full courses of lectures at this College will be required to pay only the matriculation fee.

Graduates of this institution have perpetual free admission. Graduates of other medical schools will be admitted by paying the matriculation fee.

REQUIREMENTS FOR ADMISSION.

All students entering this institution will be required to pass a preliminary examination. The examination will be conducted both orally and in writing.

Graduates from recognized Colleges, Scientific Schools or Medical Institutions, will not be required to pass this examination on joining the school.

REQUIREMENTS FOR GRADUATION.

The candidate must be twenty-one years of age, and exhibit certificates from a physician or surgeon, duly authorized by law to practice his profession, that he has studied medicine and surgery under his instruction during a term of three years.

He must have attended two full courses of lectures, the last of which must have been at this institution.

He must be of good moral character.

He must deliver to the Registrar, six weeks before the end of the term, a Thesis, written by himself on some medical subject, and be prepared to defend it at his examination.

He must pass a satisfactory examination in the several branches of medicine and surgery.

STUDENTS WHO HAVE ATTENDED TWO FULL COURSES OF LECTURES ON ANATOMY, PHYSIOLOGY, MATERIA MEDICA AND CHEMISTRY MAY BE EXAMINED ON THOSE SUBJECTS, AND, IF GIVING SATISFACTORY EVIDENCE OF PROFICIENCY IN THEM, WILL BE EXAMINED ONLY ON THE OTHER BRANCHES AT THE END OF THEIR THIRD COURSE.

Final examinations will be conducted chiefly in writing, by a series of questions on the different branches taught, and are intended to be thorough but just to the student.

The questions of the last examination can be seen on page 14

Regular and punctual attendance is required, and certificates of actual attendance, given at the end of the term.

LECTURE TERMS.

The regular term or course of lectures in the Albany Medical College begins on the first Tuesday of September in each year and continues twenty weeks.

Six lectures are given daily during the term with the exception of Saturdays and Sundays.

CLINICS.

Medical and Ophthalmic and children's Clinics will be held each Tuesday, Wednesday, and Friday at the Albany Hospital at 11 A.M. Surgical clinics will be held at the Albany Hospital, Saturdays at 11 A.M., and at St. Peter's Hospital, Wednesdays at 1:30 P.M.

EXPENSES OF LIVING.

The expenses of living in Albany are about the same as in other cities of equal size; good board can be obtained at from \$4 to \$6 per week. Other expenses must of course depend upon the habits of the student.

JACOB S. MOSHER, M.D., *Registrar*,
3 Lancaster St. Albany, N. Y.

January, 1877.

THE SPRING TERM.

A spring course of lectures will begin on the first Tuesday of April next and continue eight weeks.

Two or more lectures will be given daily and the usual Wednesday, Friday and Saturday clinics. It is designed by this course to render the studies of students more advantageous during the summer, being free to all who have matriculated at the college. The fee to others is \$5.

LECTURERS OF SPRING COURSE, to commence April 4, 1877.

S. O. VANDER POEL, M.D.—*Physical Diagnosis.*

A. VAN DERVEER, M.D.—*Surgical Diseases of the Bladder.*

JACOB S. MOSHER, M.D.—*Emergencies in Practice.*

JOHN M. BIGELOW, M.D.—*Diseases of the Throat.*

LEWIS BALCH, M.D.—*Surgical Clinic.*

SAMUEL B. WARD, M.D.—*Surgical Diseases of the Breast.*

JAMES P. BOYD, JR., M.D.—*Children's Clinic.*

WILLIS G. TUCKER, M.D.—*Alcohol as Food.*

WILLIAM HAILES, M.D.—*Laboratory Technology.*

CYRUS S. MERRILL, M.D.—*Eye Clinic.*

EUGENE VAN SLYKE, M.D.—*Anatomy of Internal Organs.*

L. D. BULKLEY, M.D.—*Diseases of the Skin.*

JAMES L. BABCOCK, M.D.—*Diseases of Children.*

F. C. CURTIS, M.D.—*Diseases of the Kidney.*

EXAMINATION PAPERS

JANUARY, 1877.

THEORY AND PRACTICE.

PROFESSORS VANDERPOEL, GRAY and E. R. HUN.

1. Give the normal temperature of the body ; the localities where it is usually taken ; the differences, if any which exists between them ; the manner and length of time required for an observation.

2. Give relation between the pulse and temperature.

3. Give the three periods which mark the progress of continued fevers, the ranges of temperature in, typhus, typhoid and intermittent fever, and the length of time which each period requires, as well as the average duration of each. •

4. Give the distinctive causes of typhus and typhoid fevers, the mode of accession of each, and the manner of termination of each.

5. Recite the lesions peculiar to *typhoid* fever and the time required to fulfill them, as well as the pathological changes which occur.

6. Recite some of the principal secondary lesions, complications of typhoid fever.

7. What are the dangers arising from each as affecting the favorable progress of the case.

8. Give treatment in typhoid fever, hygienic, dietetic, and medicinal.

9. What do you understand by auscultation and percussion as applied to the thorax ?

10. Described the methods by which they are performed.

11. What is prolonged expiration ? In what diseases is it usually noticed ? what significance is attached to it ?

12. What is the crepitant rale ; also sub-crepitant rale.

13. Give the *rational* symptoms of pneumonia, the physical signs, the pathological conditions of the lungs, and the relations of the physical signs to these conditions.

14. Recite the conditions which affect the prognosis of pneumonia, and give the general principles of treatment.

15. Name the eruptive fevers.

16. What is vaccination ?

17. Name and describe the stages of smallpox.
18. Differential characters, of smallpox, scarlet fever, measles and roseola?
19. Cirrhosis of the liver?
20. Abscess of the liver.

SURGERY AND OPHTHALMOLOGY.

PROFESSORS SWINBURNE, VANDERVEER, WARD AND MERRILL.

1. What are the symptoms, stages and treatment, of gonorrhœa?
2. Describe the history, symptoms, and signs of a popliteal aneurism, from its first appearance to an advanced stage of the disease; mention the disease for which it has been mistaken; also the treatment and cure of such an aneurism.
3. What are the symptoms indicating a laceration of an artery; of a transverse, a longitudinal and oblique incision, and the treatment of hemorrhage arising from such wounds?
4. Describe the various polypi of the nose; give the situation, attachment, appearance, symptoms, and mode of treatment of each variety.
5. What are the pathological conditions produced by a stricture of small calibre; (1). Upon the urethra behind the stricture? (2). Upon the urinary bladder? (3). Upon the kidneys? How would you treat such a stricture when situated in the spongy portion of the urethra? How, when in the membranous portion?
6. Give the symptoms of stone in the bladder, and how would you treat such a case?
7. Describe an infecting chancre, give its treatment; its constitutional symptoms and treatment.
8. Enumerate the different ways in which wounds may heal, and state what kinds of wounds heal by each method.
9. How would you treat a wound of the scalp?
10. How would you diagnose and treat a cystic tumor?
11. What is the object of operating in fracture of the skull? What kinds of fracture demand operation? In what does the operation consist?
12. How do you explain the formation of metastatic abscesses in pyæmia?
13. Describe Chopart's amputation. What advantages and what disadvantages does it possess?
14. How is excision of the shoulder-joint performed?
15. What are the two principles involved in the treatment of fractures?

16. What are we to avoid, to obviate bad results?
17. Give the treatment for acute catarrhal conjunctivitis.
18. What is the effect of atropine when absorbed by a healthy eye?
19. Give the symptoms and course of an attack of plastic iritis.
20. Give the causes of iritis, and the treatment.

CHEMISTRY, MEDICAL JURISPRUDENCE AND HYGIENE.

PROFESSORS MOSHER, PERKINS AND TUCKER.

1. State the difference between a direct and an induced galvanic current.
2. In what does chemical action differ from mechanical mixture?
3. Explain "Symbolic Notation" and give names for N, S, P, O, Cl, I, Br, K, Ag, Hg, Au.
4. Give the law of constancy of chemical composition.
5. Give the law of multiples.
6. Give the law of equivalents.
7. State as fully as you can, the physical and chemical properties of oxygen, and give the ordinary method of preparation with reaction in symbols.
8. Express in symbols the reaction which occurs when dilute sulphuric acid is added to zinc. Name the factors and products, and state the class to which each belongs.
9. By the above reaction how many grammes of hydrogen would be furnished by 100 grammes of zinc?
10. Name and describe, as fully as you can, the three allotropic forms of carbon.
11. Define combustion and give several examples of gaseous, liquid and solid combustible substances which might be employed for the production of heat or light. The symbol of alcohol is C_2H_6O . State the reaction which occurs when it is burned.
12. Give the five most important constituents of the atmosphere with the relative abundance of the three most prominent, and describe the relations of each to animal and vegetable life.
13. In how many allotropic forms may sulphur exist. Describe each and write the symbols, and give the names of the oxides of sulphur and the acids formed from them.
14. What statements of a patient made to a physician, are privileged and not to be divulged even in court.

15. Under what legal restrictions :

I. May a patient change his physician ?

II. May a physician withdraw from the charge of a patient ?

16. What is the chemical name of white arsenic (ratsbane); in poisoning by it what is the fatal dose, symptoms, time of death, and what should be the treatment? Also what examination at the bedside would prove the substance found to be arsenic ?

17. What (at the bedside, and in the emergency of determining at once), would be the means of detecting corrosive sublimate and what would be the treatment in a case of poisoning by it.

18. Under similar circumstances, the differences between oxalic acid and substances which resemble it.

19. What phosphorous compounds are used in poisoning, and how are they to be recognized ?

20. What are the hygienic relations of water, in a city ?

MATERIA MEDICA AND THERAPEUTICS.

PROF. BIGELOW.

1. Give the name, habitat, active principles, officinal preparations, doses, mode of action, therapeutics, of the American hellebore.

2. Of aconite.

3. Of digitalis.

4. Of ergot.

5. Of gelsemium.

6. Of cantharis.

7. Of camphor.

8. Of sanguinaria.

9. Of salicin ; elaterium.

10. Of hydrastis ; podophyllum.

11. Define anæsthesia ; state the number, name, properties, doses, mode of action, antidotes to the most commonly used anæsthetics ; describe the stages of anæsthesia, and causes of death by anæsthetic agents.

12. What medicines are used to promote sleep ; in what doses ; what indications would determine your selection of each ?

13. Explain the action and describe the therapeutical indications and uses of iodine and its compounds ; of arsenic ?

14. Give the name, habitat, active principles, officinal preparations, doses, alkaloids and doses, mode of action, therapeutical uses, of cinchona.

15. Give the name and doses, mode of action and therapeutical uses of the principal mercurial preparations ?

16. Write a formula which shall contain not less than three different ingredients for dysentery, pneumonia, rheumatism, gonorrhœa, syphilis.

17. If the following prescriptions contain errors, correct them :

R. Morphiæ acetatis ℥ss.

Aquæ puræ ℥i.

Spts. ætheris nitrosi ℥i.

M.

S. Tablespoonful every 2 hours.

R. Tinct. ferri chloridi ℥i.

Syrupi acaciæ ℥i.

Acid. tannici ℥ss.

M.

S. Teaspoonful every hour.

18. Describe the medicinal uses of cold water, and its antipyretic action.

19. What are the doses of iodoformum, strychniæ sulphas, phosphorus, morphiæ sulphas, apiol, atropiæ sulphas, zinci sulphas (as an emetic), cupri sulphas (as an emetic), liquor potassæ arsenitis, turpethi mineral, physostigma, antimonii et potassæ tartras, hydrargyri iodidum viridum, hydrargyri iodidum rubrum, hydrargyri chloridum corrosivum, spiritus ætheris compositus.

20. What are doses for hypodermic injection, of morphiæ sulphas, ergotin, atropiæ sulphas, strychniæ sulphas, acidum carbolicum

ANATOMY, HISTOLOGY AND PATHOLOGICAL ANATOMY.

PROFESSORS BALCH AND HAILES.

1. Define a cell, and what is meant by simple division, germination and endogenous growth.

2. Define connective tissue, and its varieties.

3. Give histology of cartilage and bone.

4. Give histology of liver and kidney.

5. Describe the first rib and give its points of surgical interest.

6. Describe the superior maxillary bone, giving its articulations and the muscles attached to it.

7. Give the origin, insertion, manner of formation, and action of the deltoid muscle.

8. What are the muscles which keep the body erect upon the thighs?

9. Give the origin, course, branches, and their distribution, of the right external carotid, with the guides by which to find the vessel and the places where ligatures may be applied.
10. Describe the femoral artery in the same manner.
11. What are the ligaments of the hip joint, and to what class of articulations does it belong?
12. Give the same description of the knee joint.
13. Give the anatomy of inguinal hernia.
13. Give the anatomy of the penis and the lengths of the different urethral portions.
15. What causes the descent of the testicle into the scrotum.
16. Define atrophy and state varieties.
17. What are degenerations, metamorphoses and infiltrations, and give examples of each.
18. Give pathology of catarrhal and croupous inflammations.
19. When is a growth homologous, heterologous or malignant, and give examples.
20. Define sarcoma and carcinoma, state varieties and distinguishing microscopical differences.

OBSTETRICS.

PROFESSOR BOYD.

1. Describe the vulva, the vagina, the uterus and its appendages.
2. Describe the superior and inferior straits, including the diameters.
3. In what respect does the female pelvis differ from the male?
4. Describe the corpus luteum of pregnancy.
5. Describe the placenta.
6. Describe the foetal cranium, its sutures and fontanelles.
7. Describe the foetal circulation.
8. How would you determine the existence of extra-uterine pregnancy?
9. Give the symptoms and treatment of the albuminuria of pregnancy?
10. How can you determine whether it is the head or the breech of the child which presents?
11. Give the mechanism of labor in the right transverse mento-iliac position.
12. Give the diagnosis of the pelvic presentation, its mechanism and treatment.
13. Give the symptoms and treatment of placenta prævia.
14. Give the treatment of post-partum hemorrhage.

15. Give the treatment of puerperal convulsions.
16. Describe the operation of version.
17. At what time during the progress of a labor is it advisable to use the forceps?
18. Describe pelvic peritonitis, and pelvic cellulitis.
19. Give the treatment for abscess of the mammary gland.
20. What is puerperal fever?

PHYSIOLOGY.

PROFESSOR WEBSTER.

1. Define proximate principles.
2. Composition and general characters of hydrocarbonaceous and albuminous proximate principles.
3. Origin and physiological action of saliva.
4. Origin and function of gastric juice.
5. Sources from which the liver receives blood.
6. Functions of the liver.
7. Characters of red blood corpuscles.
8. Describe coagulation of blood.
9. Function of coagulation in the organism.
10. Nature of respiration.
11. Function of diaphragm in respiration.
12. Changes of the blood in respiration.
13. Changes of the air in respiration.
14. Normal temperature of the body.
15. How is the temperature of the body maintained and regulated?
16. Source and composition of urine.
17. Compare excretions with secretions, and indicate to which group saliva, bile, gastric juice, pancreatic juice, urine and milk belong.
18. Functions of the crico-thyroid and arytenoid muscles.
19. Trace the blood from the left ventricle to the left auricle.
20. Discuss the sense of taste.

Union University.

SCHOOL OF CIVIL ENGINEERING

OF

UNION COLLEGE, SCHENECTADY, N. Y.

The object of this Department, which was organized in UNION COLLEGE in 1845, is to give its Students such instruction in the Theory and Practice of CIVIL ENGINEERING as to qualify them for immediate usefulness in the field and office in subordinate relations, and at the same time to fit them to fill satisfactorily the higher positions in the profession after a moderate amount of experience in the routine of practice.

The thoroughness and completeness of the course of instruction, the unsurpassed excellence of its illustrative apparatus, the opportunities and arrangements for field practice, the moderate charges (\$25 per term), and the fact that Students have access without further charge to the teachings of the other departments, commend the course to those contemplating the Engineering profession.

For circulars, or for specific information, address

PROF. CADY STALEY or
PRESIDENT E. N. POTTER, D.D.

DUDLEY OBSERVATORY, ALBANY.

METEOROLOGICAL DEPARTMENT.

The United States Signal service has taken charge of the Physical Observatory for the establishment of a Distributing Centre at Albany. The force is under the immediate command of the Chief of the Service,

GEN. A. J. MYER.

THE ASTRONOMICAL DEPARTMENT is in charge of

LEWIS BOSS, Esq.

UNION UNIVERSITY.

REV. ELIPHALET NOTT POTTER, D.D.,
President.

Department of Law.

HON. THOMAS W. OLCOTT,
President, - - - 9 Third Street.

ORLANDO MEADS, LL.D.,
Secretary, - - - 4 Pine Street.

HON. WILLIAM F. ALLEN, LL.D.,
Professor of Real Property.
Oswego.

HON. WILLIAM L. LEARNED,
Civil Law; and Equity Jurisprudence.
298 State Street.

ISAAC EDWARDS, LL.D.,
Professor of Personal Property, Contracts and Commercial Law.
73 Ten Broeck Street.

HON. MATTHEW HALE,
Professor of Criminal Law and Domestic Relations.
140 Swan Street.

PRESIDENT POTTER,
Feudal System.
Schenectady.

DR. HENRY COPPÉE,
International Law.

CALENDAR.

The Collegiate Year includes a special Spring Course, and a regular Session. Attendance at the Spring lectures is optional, but strongly recommended. Attendance at the Winter Course, commencing in September, is requisite for graduation.

The Spring Course for 1878, commences April 2d and continues 8 weeks. No Preliminary Examination is required for this course.

The Winter Session for 1878-9, commences September 3d and continues 20 weeks. The Preliminary Examination for this session will be held at 4 P. M., September 3.

Students can matriculate at the commencement of either session.

ORDER OF LECTURES AND CLINICS, 1877-78.

Medical and Ophthalmic and Children's Clinics held each Tuesday, Wednesday and Friday at the Albany Hospital at 11 A. M. Surgical clinics at the Albany Hospital, Saturdays at 11 A. M., and at St. Peter's Hospital, Wednesdays at 1:30 P. M.

1878.

The Albany Medical College forms now the Medical Department of Union University. This new relation assumed in 1873, by virtue of appropriate legislative action, and the concurrence of the several Boards of Trustees of the Law and Medical Schools and the Dudley Observatory at Albany, and of Union College at Schenectady, adds to the completeness and efficiency of each of these institutions.

The College Building, situated on Eagle street, is a fine, large edifice well appointed in its lecture rooms, chemical laboratory, dissecting room and library.

The location of the College at Albany is such as to afford advantages not surpassed by any other city. In so large and busy a place there is never any lack of material for the illustration of clinical medicine and surgery, and the material for practical anatomy fully meets the requirements of the classes.

The Museum is especially rich in its anatomical preparations. It contains the valuable morbid specimens accumulated by the late Drs. March, Armsby and McNaughton, and is unequalled in their variety and rarity and in its models. The library of the College contains nearly 5,000 volumes, and arrangements are being made for its constant increase.

The aim of the Faculty is to make the course practical, and scientific. This is done by combining with didactic lectures, clinical lectures, recitations and practical work in the laboratories and dissecting room; by the examination and diagnosis, by students, of cases assigned them, and by reports and criticisms of the same by the class and the professors.

The Faculty are well aware of the value of Clinical Instruction to the medical student and, endeavor to make this an especial feature of the course.

The Albany Hospital, St. Peter's Hospital and the County Hospital, together with the Eye and Ear Infirmary and the Dispensaries connected with each, are, by the regulations of their governing boards, made available for clinical purposes to the students.

The appointments to positions in the Hospital as house physician and surgeon and apothecary are annually made, and are competed for by members of the graduating class.

Members of any other department of the University have the right to attend medical lectures without the payment of additional fees. Undergraduates intending to study medicine are advised to pay attention more especially to the division of studies, as indicated in the following regulation concerning Primary and Practical branches.

STUDENTS WHO HAVE ATTENDED TWO FULL COURSES OF LECTURES ON ANATOMY, PHYSIOLOGY, MATERIA MEDICA AND CHEMISTRY MAY BE EXAMINED ON THOSE SUBJECTS, AND, IF GIVING SATISFACTORY EVIDENCE OF PROFICIENCY IN THEM, WILL BE EXAMINED ONLY ON THE OTHER BRANCHES AT THE END OF THEIR THIRD COURSE.

P14253

FACULTY OF MEDICINE.

ELIPHALET NOTT POTTER, D. D.,

PRESIDENT OF THE UNIVERSITY.

AMASA J. PARKER, LL. D.,

PRESIDENT OF THE BOARD OF TRUSTEES.

THOMAS HUN, M. D.,

Dean of the Faculty, and Emeritus Professor of the Institutes of Medicine.

S. O. VANDER POEL, M. D.,

Professor of Theory and Practice, and Clinical Medicine.

JOHN SWINBURNE, M. D.,

Professor of Fractures and Dislocations and Clinical Surgery.

ALBERT VAN DERVEER, M. D.,

Professor of the Principles and Practice of Surgery.

JACOB S. MOSHER, M. D.,

Registrar, and Professor of Medical Jurisprudence and Hygiene.

MAURICE PERKINS, M. D.,

Professor of Chemical Philosophy and Organic Chemistry.

JOHN M. BIGELOW, M. D.,

Professor of Materia Medica and Therapeutics.

LEWIS BALCH, M. D.,

Professor of Anatomy.

SAMUEL B. WARD, M. D.,

Professor of Surgical Pathology and Operative Surgery.

JOHN P. GRAY, M. D., LL. D.,

Professor of Psychological Medicine.

EDWARD R. HUN, M. D.,

Professor of Diseases of the Nervous System.

JAMES P. BOYD, JR., M. D.,

Professor of Obstetrics and Diseases of Women and Children.

WILLIS G. TUCKER, M. D.,

Professor of Inorganic and Analytical Chemistry.

WILLIAM HAILES, M. D.,

Anthony Professor of Histology and Pathological Anatomy.

CYRUS S. MERRILL, M. D.,

Professor of Ophthalmology.

HARRISON E. WEBSTER, A. M.,

Lecturer on Physiology.

HENRY MARCH, M. D.,

Curator of the Museum.

EUGENE VAN SLYKE, M. D.,

Demonstrator of Anatomy.

MEDICAL REGULATIONS.

PRELIMINARY EXAMINATION.

Graduates from recognized Colleges, Scientific Schools or Medical Institutions, and those holding certificates of having passed successfully the Regents' Examination, will not be required to pass the preliminary examination on joining the school.

All other students entering this institution will be required to pass a preliminary examination, equivalent to the Academical Examination of the Board of Regents of the state of New York. The examination will be conducted both orally and in writing, and the spelling, grammar and construction of the writing will be considered.

COURSE OF INSTRUCTION. ANATOMY

Is taught by lectures, recitation and demonstration, dissection being required before a student can be admitted to final examination. Great attention is paid to study in Practical Anatomy, under the direction of the professor and demonstrator of this department.

PRACTICAL CHEMISTRY.

The WORKING LABORATORY FOR PRACTICAL CHEMISTRY is open during the entire year. Students are received singly or in classes, for instruction in Chemical Analysis and Medical Chemistry. The instruction given is in harmony with the lectures on chemistry delivered during the term, and is so conducted as to secure to the student a practical familiarity with the apparatus, materials, processes and reactions which are the subjects of his professional study, and which are to be employed in his subsequent practice. With this practical instruction is combined a study of the principles of theoretical chemistry, chemical notation, nomenclature, etc.

The Laboratory is well lighted and conveniently arranged. Each student has a desk and chemicals for his own use and is supplied with all necessary apparatus. During the lecture course the Laboratory classes are so arranged as not to interfere with the lectures and other college exercises. Students are urged to avail themselves of the privileges thus afforded, and if possible, during their first course of lectures.

PATHOLOGICAL ANATOMY AND HISTOLOGY.

The study of minute anatomy, in the first instance by microscopes, is aided by illustrations before the class by means of improved cameras with oxyhydrogen lights. A photographic gallery is connected with the hospital, in which specimens of healthy and morbid minute tissues are photographed upon glass and subsequently used for class illustrations. A set of Dr. Woodward's celebrated slides, made at the United States Army Medical Museum, Washington, has been added to the already large collections now in possession of the college.

HISTOLOGICAL LABORATORY COURSE.

LESSON 1.—FRESH HUMAN BLOOD, Examine 1st. Red corpuscles; 2d. White corpuscles; 3d. With Strickers warm stage; 4th. For blood crystals; Chloro-hæmatine; Hæmatine; Hæma-globine.

LESSON 2.—CONNECTIVE TISSUE; 1st. From thigh of frog. ELASTIC TISSUE; 1st. From ligamentum nuchæ; 2d. Middle coat of artery. FIBROUS TISSUE; 1st. From tendo Achilles; 2d. From the rat's tail. These are to be prepared; 1st. In teased preparations; 2d. In sections, longitudinal and transverse.

LESSON 3.—ADIPOSE TISSUE; 1st. Isolated; 2d. In mesentery; 3d. In sections (stained); 4th. Treated with ether. CARTILAGE; 1st. Sections (stained); 2d. Boiled, to show cell territory. FIBRO-CARTILAGE; 1st. From the ear; 2d. From the epiglottis.

LESSON 4.—BONE (from the sheep or calf); 1st. Longitudinal; 2d. Transverse; 3d. With the periosteum attached. TEETH; 1st. Longitudinal; 2d. Transverse; 3d. The bats jaw.

LESSON 5.—VOLUNTARY MUSCULAR FIBRE: 1st. Teased; 2d. Sections; Transverse and longitudinal; 3d. Bowman's disks, shown by means of dilute HCl or gastric juice; 4th. Injected; 5th. From the heart. INVOLUNTARY MUSCULAR FIBRE; 1st. From bladder and stomach of frog; 2d. From the middle coat of an artery; 3d. From uterus.

LESSON 6.—MEDULLATED NERVE FIBRE; 1st. Teased; 2d. Section, transverse and longitudinal; 3d. Treated with osmic acid; 4th. With collodion; 5th. From the vagus nerve. NON-MEDULLATED or ganglionic nerve cell obtained from spinal cord. Sections of spinal cord.

LESSON 7.—ARTERIES; transverse. VEINS; transverse. SKIN; 1st. From finger; 2d. From axilla; 3d. From eye-lids. HAIR; 1st. From scalp; 2d. From pubis. NAILS; Sections, longitudinal and transverse; (from newly born infant.)

LESSON 8. DIGESTIVE TRACT. Tongue; 1st. Papillæ; 2d. Taste bulbs; Salivary glands. Œsophagus; Transverse section (stained). Stomach; 1st. Cardiac end; 2d. Pyloric end (from man; dog; frog). Duodenum; Brunner's glands. Ileum; Peyer's patches. Cæcum; Solitary glands.

LESSON 9. LIVER.—Section 1st. Portal vein, injected. 2d. Portal and hepatic veins, injected.

LESSON 10.—KIDNEY.—Section 1st. Renal artery, injected. 2d. Renal artery and vein, injected.

LESSON 11.—RESPIRATORY TRACT; 1st. Larynx; 2d. Trachea; 3d. Lungs; Sections of bronchi, infundibuli and alveoli.

LESSON 12.—EYE; 1st. Cornea; 2d. Ciliary Body; 3d. Choroid. 4th. Retina.

SPECIAL COURSE IN EPITHELIUM, ENDOTHELIUM AND LYMPHATICS. 1st. Epithelium; 2d. Web of frog's foot; 3d. Cornea; 4th. Iso-

lated; 5th. Peritoneum; 6th. Deep lymph sac; 7th. Endothelia of arteries and veins and lymphatics; 8th. Lymphatics of diaphragm (guinea pig, rabbit or kitten); 9th. Lymphatic plexus in frog's rectum, capillaries injected. 10th. Peri-Lymphatic spaces of His. 11th. Puncture (einsteck) method for lymphatics.

PATHOLOGICAL LABORATORY COURSE.

LESSON 1.—ATROPHY (simple and numerical); DEGENERATIONS Fatty; Mucoïd; Colloid; Amyloid; Calcareous; Pigmentary.

LESSON 2.—FIBROMATA and MYXOMATA.

LESSON 3.—LIPOMATA and LYMPHOMATA.

LESSON 4.—ENCHONDROMATA and OSTEOMATA.

LESSON 5.—PAPILLOMATA and ADENOMATA.

LESSON 6.—MYOMATA, NEUROMATA and ANGIOMATA.

LESSON 7.—INFLAMMATION; General anatomy of; 2. Conheim's experiment in Mesentery of frog; 3. Suppurative Inflammation; 4. Interstitial; 5. Cirrhosis.

LESSON 8.—INFLAMMATION OF KIDNEY; Suppurative; Tubal Interstitial nephritis.

LESSON 9.—PNEUMONIA; Catarrhal; Croupous; Interstitial.

LESSON 10.—PULMONARY PHTHISIS; TUBERCLE.

LESSON 11.—INFLAMMATION OF BRAIN AND SPINAL CORD; Acute softening; Sclerosis.

LESSON 12.—SARCOMA; Spindle celled; Melanotic; Osteoid; Round celled; Myeloid.

LESSON 13.—CARCINOMATA; Schirrus; Encephaloid; Colloid; Epithelioma.

Requirements for Graduation.

The candidate must be twenty-one years of age, and exhibit certificates from a physician or surgeon, duly authorized by law to practice his profession, that he has studied medicine and surgery under his instruction during a term of three years.

He must have attended two full courses of lectures, the last of which must have been at this institution.

He must be of good moral character.

He must deliver to the Registrar, six weeks before the end of the term, a Thesis, written by himself on some medical subject, and be prepared to defend it at his examination.

He must pass a satisfactory examination in the several branches of medicine and surgery.

Final examinations will be conducted chiefly in writing, by a series of questions on the different branches taught, and are intended to be thorough but just to the student.

The questions of the examination are published in the circular in January.

Regular and punctual attendance is required, and certificates of actual attendance, given at the end of the term.

FEES AND EXPENSES.

All fees are payable at the beginning of the term. For matriculation, five dollars, payable each year; for the year's lectures, one hundred dollars. Perpetual lecture ticket, one hundred and fifty dollars. Students who have attended two full courses of lectures at this college, will be required to pay only the matriculation fee. Students who have attended two full courses of lectures at other accredited medical colleges, will be required to pay twenty-five dollars and the matriculation fee. Graduates of this institution have perpetual free admission. Graduates of other medical schools will be admitted after paying the matriculation fee. Dissection, ten dollars, which is required the first year and optional during other years of the course; dissecting material is free, and there are no incidentals in this department. The graduation fee is twenty-five dollars, which must be paid to the registrar before the candidate can be admitted to an examination.

Summary of Fees for Two Years.

FIRST YEAR:

For Matriculation,	\$ 5
" Lecture Tickets,	100
" Dissection,	10
	<hr/>
	\$115

SECOND YEAR:

For Matriculation,	\$ 5
" Lecture Tickets,	100
" Graduation Fee,	25
	<hr/>
	\$130

Total fees for graduation with two courses of lectures, \$245.

The student by purchase of the Perpetual Lecture Ticket will reduce this amount to \$195.

Other Fees Optional with the Student.

Matriculation for additional courses (each year),...	\$ 5
Additional courses of dissection (each year),	10
Chemical Laboratory (each course),	10
Laboratory course in Histology (each course),	10

The other expenses of the student may be reduced in accordance with his means, and living expenses may be made more economical in Albany than in most other large cities. The janitor of the Medical College has a list of boarding houses where board can be

obtained from four to six dollars a week, and also of rooms in the vicinity of the college, where, by adopting the English plan of lodgings, the student's expenses for living can be brought within even lower rates without any sacrifice of comfort.

January, 1878.

DUDLEY OBSERVATORY,

ALBANY.

ASTRONOMICAL DEPARTMENT.

This department was reorganized in the summer of 1876. The instruments are now actively employed in astronomical observation. The buildings and scientific apparatus belonging to the observatory have undergone important improvements, and there is every probability of a considerable extension of scientific operations in the near future.

Personal Establishment:

PROF. LEWIS BOSS, A. M., Director.

OLIVER H. LANDRETH, A. B., Assistant.

METEOROLOGICAL DEPARTMENT.

The United States Signal service has taken charge of the Physical Observatory for the establishment of a Distributing Centre at Albany. The force is under the immediate command of an Observer Sergeant, who is responsible to the Chief of the Service,

GEN. A. J. MYER.

Association of the Alumni

OF THE

ALBANY MEDICAL COLLEGE.

Incorporated February 6th, 1874.

This Association was organized January 20, 1874. The membership consists of the officers and graduates of the college. Total number of graduates, 1500. Names and addresses upon the roll, 850. The object of the Association is to promote the interests of the college in the work of medical-education, and to cultivate social intercourse among the alumni. The annual meeting is held upon the evening of commencement day. The officers of the Association are elected annually.

Officers for 1877.

President.

DR. RICHARD F. STEVENS, Syracuse, N. Y. ('41).

Vice-Presidents.

DR. JAMES H. SCOON,..... Amsterdam, N. Y. ('49).
DR. FREDERICK S. GREENE,..... Coxsackie, N. Y. ('46).
DR. JOHN A. LIDELL,..... New York city ('48).
DR. HENRY K. McLEAN,..... Hoosick Falls, N. Y. ('50).
DR. GIDEON H. ARMSBY,..... Albany ('64).

Secretary.

DR. WILLIS G. TUCKER,..... Albany ('70).

Treasurer.

DR. GEBHARD L. ULLMAN,..... Albany ('71).

Executive Committee.

DR. JACOB S. MOSHER,..... Albany ('63).
DR. PHINEAS H. STRONG,..... Buffalo, N. Y. ('39).

DR. JOHN W. WARNER,.....	New York city ('47).
DR. STAATS WINNE,.....	Albany ('51).
DR. WILLIAM H. CRAIG,.	Albany ('52).
DR. HENRY S. CASE,.....	Albany ('53).
DR. ROBERT H. SABIN,.....	West Troy, N. Y. ('56).
DR. JOHN N. HAYNES,.....	Cohoes, N. Y. ('72).
DR. LINZIE T. MORRILL,.....	Albany ('73).
DR. WILLIAM L. PURPLE,.....	Albany, ('75).

The next annual meeting will be held in the college building, on Wednesday, January 30, 1878, at half-past two P. M. A reception will be held in the forenoon; at which the officers of the Association and faculty of the college will be present. The Alumni Dinner will take place at the Delavan House, in the evening, upon the close of the commencement exercises at Martin Hall. All graduates of the college are urged to be present. So far as their addresses can be ascertained, all graduates of the college are notified of the annual meetings through the mail. Those who do not receive such notice regularly are requested to furnish the Secretary with their addresses and to keep him informed of any change in their place of residence. The yearly dues are fixed at one dollar. This may be sent to Dr. G. L. Ullman, Treasurer, No. 71 Central avenue, Albany, N. Y.

RICHARD F. STEVENS, M. D.,

President.

WILLIS G. TUCKER, M. D.,

Secretary, Albany Medical College, Albany, N. Y.

Union University.

SCHOOL OF CIVIL ENGINEERING

OF

UNION COLLEGE, SCHENECTADY, N. Y.

The object of this Department, which was organized in UNION COLLEGE in 1845, is to give its Students such instruction in the Theory and Practice of CIVIL ENGINEERING as to qualify them for immediate usefulness in the field and office in subordinate relations, and at the same time to fit them to fill satisfactorily the higher positions in the profession after a moderate amount of experience in the routine of practice.

The thoroughness and completeness of the course of instruction, the unsurpassed excellence of its illustrative apparatus, the opportunities and arrangements for field practice, the moderate charges (\$25 per term), and the fact that Students have access without further charge to the teachings of the other departments, commend the course to those contemplating the Engineering profession.

CALENDAR.

The Collegiate Year includes a special Spring Course, and a regular Session. Attendance at the Spring lectures is optional, but urgently advised. Attendance at the Winter Course, commencing in October, is requisite for graduation.

The Spring Course for 1879, commences April 1st and continues 8 weeks. No Preliminary Examination is required for this course.

The Winter Session for 1879-80, commences October 7, and continues 20 weeks. The Preliminary Examination for this session will be held at 3:30 P. M., October 7.

For Preliminary Examination see page 9.

Students can matriculate at the commencement of either session.

1879.

! Union University includes the Albany Medical College and Law School, the Dudley Observatory at Albany and Union College at Schenectady. The Medical College enters this year on the last decade of a half century of active work.

Recent changes made in the course of study and requirements for graduation which look to a higher standard for medical degrees, have been favorably received by the profession; the Faculty are gratified in seeing that the class for 1878-79 is so much larger than ever before in the history of the institution, as notably to indicate the favor with which the Alumni and friends of the College look upon these efforts for higher grade. In pursuance of the same policy, it has been determined that WITH THE SESSION OF 1880-81 AND THEREAFTER, A THREE YEARS GRADED COURSE SHALL BE AN ABSOLUTE REQUISITE FOR GRADUATION IN THIS COLLEGE.

The College Building, situated on Eagle street is a fine, large edifice well appointed in its lecture rooms, laboratories, dissecting room and library.

The location of the College at Albany is such as to afford advantages not surpassed in any other city. In so large and busy a place there is never any lack of material for the illustration of clinical medicine and surgery, and the material for practical anatomy fully meets the requirements of the classes.

The Museum is especially rich in its anatomical preparations. It contains the valuable morbid specimens accumulated by the late Drs. March, Armsby and McNaughton, and is unequalled in their variety and rarity and in its models. The library of the College contains nearly 5,000 volumes, and arrangements are being made for its constant increase.

The aim of the Faculty is to make the course practical, and scientific. This is done by combining with didactic lectures, clinical lectures, recitations and practical work in the laboratories and dissecting room; in the examination and diagnosis, by students, of cases assigned them, and by reports and criticisms of the same by the class and the professors. Clinical Instruction is made an especial feature of the course.

The Albany Hospital, St. Peter's Hospital, Eye and Ear Relief and the County Hospital, together with the Eye and Ear Infirmary and the Dispensaries connected with each, are, by the regulations of their governing boards, made available for clinical purposes to the students.

The appointments to positions in the Hospital as house physician and surgeon and apothecary are annually made, and are competed for by members of the graduating class.

Members of any other department of the University have the right to attend medical lectures without the payment of additional fees. Undergraduates intending to study medicine are advised to pay attention more especially to the division of studies, as indicated in the regulations concerning Primary and Practical branches on page 9.

Order of Spring Course of Lectures, commencing April 1st, 1879.

Hours.	MONDAYS.	TUESDAYS.	WEDNESDAYS.	THURSDAYS.	FRIDAYS.
10 A. M.	April 7, 14, 21, 28, DR. MOSHER. May 6, 12, 19, DR. HAILES.	April 1, 8, 15, 22, DR. BIGELOW, April 29, May 6, 13, 20, DR. HALE.	April 2, 9, 16, 23, DR. BALCH. April 30, May 7, 14, 21, DR. VAN SLYKE.	DR. STONEHOUSE.	DR. CLARK.
11 A. M.	DR. MORRILL.	April 1, 8, 15, 22, DR. BOYD. April 29, May 6, 13, 20, DR. BABCOCK.	DR. SCHUYLER.	DR. CURTIS.	April 4, 11, 18, 25, DR. KEEGAN. May 2, 9, 16, 23, DR. TUCKER.
12 M.	April 7, 14, 21, 28, May 5, 12, DR. BAXTER. May 19, QUIZ.	April 1, 8, 15, 22, DR. WARD. April 29, May 6, 13, 20, DR. VAN DERVEER.	DR. PERRY.	April 3, 10, 17, 24, May 1, 8, DR. COOK. May 15, 22, DR. VAN SLYKE.	DR. MERRILL.

Surgical Clinics on Saturday at the College 10 A. M., and at the Albany Hospital 11:30 A. M.
 Laboratory Class in Practical Chemistry, under charge of Dr. Tucker.
 Laboratory Class in Histology and Pathology, under charge of Drs. Hailes and W. B. Fish.

MEDICAL REGULATIONS.

PRELIMINARY EXAMINATION.

Graduates from recognized Colleges, Scientific Schools or Medical Institutions, will not be required to pass the preliminary examination on joining the school.

All other students entering this institution will be required to pass a preliminary examination in English which will be conducted both orally and in writing.

COURSE OF INSTRUCTION. *Anatomy*

Is taught by lectures, recitation and demonstration, dissection being required before a student can be admitted to final examination. Great attention is paid to study in Practical Anatomy, under the direction of the professor and demonstrator of this department.

LABORATORIES. *Practical Chemistry.*

The WORKING LABORATORY FOR PRACTICAL CHEMISTRY is open during the entire year. Students are received singly or in classes, for instruction in Chemical Analysis and Medical Chemistry. The instruction given is in harmony with the lectures on chemistry delivered during the term, and is so conducted as to secure to the student a practical familiarity with the apparatus, materials, processes and reactions which are the subjects of his professional study, and which are to be employed in his subsequent practice. With this practical instruction is combined a study of the principles of theoretical chemistry, chemical notation, nomenclature, etc.

The Laboratory is well lighted and conveniently arranged. Each student has a desk and chemicals for his own use and is supplied with all necessary apparatus. During the lecture course the Laboratory classes are so arranged as not to interfere with the lectures and other college exercises. Students are urged to avail themselves of the privileges thus afforded, and if possible, during their first course of lectures.

Pathological Anatomy and Histology.

The study of minute anatomy, in the first instance by microscopes, is aided by illustrations before the class by means of improved cameras with oxyhydrogen lights. A photographic gallery is connected with the hospital, in which specimens of healthy and morbid minute tissues are photographed upon glass and subsequently used for class illustrations. A set of Dr. Woodward's celebrated slides, made at the United States Army Medical Museum, Washington, has been added to the large collections in possession of the college. The Laboratory courses are under the direction of the professor of that department and are adapted so that practical and thorough investigations can be made without interference with other studies during the course.

Classes in Embryology, Histology and Pathology, will be formed. Each course to consist of twelve lessons, and all necessary material, reagents and microscopes furnished.

Price for each course,.....\$10.
Laboratory open daily from 8 A.M. to 6 P.M.

FEES AND EXPENSES.

All fees are payable at the beginning of the term. For matriculation, five dollars, payable each year; for the year's lectures, one hundred dollars. Perpetual lecture ticket, one hundred and fifty dollars. Students who have attended two full courses of lectures at this college, will be required to pay only the matriculation fee. Students who have attended two full courses of lectures at other accredited medical colleges, will be required to pay twenty-five dollars and the matriculation fee. Graduates of this institution have perpetual free admission. Graduates of other medical schools will be admitted after paying the matriculation fee. Dissection, ten dollars, which is required the first year and optional during other years of the course; dissecting material is free, and there are no incidentals in this department. The graduation fee is twenty-five dollars, which must be paid to the registrar before the candidate can be admitted to an examination. Laboratory courses ten dollars each.

SUMMARY OF FEES FOR TWO YEARS.

FIRST YEAR:

For Matriculation,.....	\$ 5
" Lecture Tickets,.....	100
" Dissection,	10
	<hr/>
	\$115

SECOND YEAR:

For Matriculation,.....	\$ 5
" Lecture Tickets,.....	100
" Graduation Fee,.....	25
	<hr/>
	\$130

Total fees for graduation with two courses of lectures, \$245.

The student by purchase of the Perpetual Lecture Ticket will reduce this amount to \$195.

OTHER FEES OPTIONAL WITH THE STUDENT.

Matriculation for additional courses (each year),....	\$ 5
Additional courses of dissection (each year),.....	10
Chemical Laboratory (each course),.....	10
Laboratory course in Histology (each course),.....	10

The other expenses of the student may be reduced in accordance with his means, and living expenses may be made more economical in Albany than in most other large cities. The janitor of the Medical College has a list of boarding houses where board can be obtained from four to six dollars a week, and also of rooms in the vicinity of the college, where, by adopting the English plan of lodgings, the

student's expenses for living can be brought within even lower rates, without any sacrifice of comfort.

BOOKS RECOMMENDED.

For Text Books.	Books Recommended for Reference.
ANATOMY — Gray.....	Wilson, Holden, Holden's Osteology,
HISTOLOGY — Stricker.....	Frey, [Sharpey and Quain.
PATHOLOGICAL ANATOMY — Greene.....	Wagner.
PHYSIOLOGY — Huxley.....	Flint, Dalton, Marshall.
MAT. MED. AND THERAP.—Bartholow, ..	Ringer, U. S. Dispensatory, Stillé.
CHEMICAL PHILOSOPHY — Fownes.....	Dewar.
ORGANIC CHEMISTRY — Fownes, ..	Bloxam, Fownes.
INORGANIC — Miller's Introduction,....	Fresenius.
ANALYTICAL CHEMISTRY — Crafts,...	Thudichum.
CHEMISTRY OF URINE — Legg, Tyson,...	
THEORY AND PRACTICE — Flint,.....	[Reynolds.
MEDICAL JURISPRUDENCE — Taylor,....	Watson, Niemeyer, Bristowe, Aitkin,
HYGIENE,	Ordonaux, Beck, Wharton and Stillé.
PSYCHOLOGICAL MEDICINE — Priesinger,	Parkes.
DISEASES NERVOUS SYSTEM — Clymer,	Bucknill & Tuke, Blanford.
	Mitchell, Jackson.
FRACTURES & DISLOCATIONS — Hamilton,	Gross, Holmes.
PRIN. AND PRACT. OF SURGERY — Bryant,	Gross, Holmes, Erichsen.
SURGICAL PATHOLOGY — Billroth,...	Paget.
OPERATIVE SURGERY — Smith's H'dbook,	Bernard & Huette.
OPHTHALMOLOGY,	Wells, Stellwag.
OBSTETRICS — Leishman,	Cazeaux, Playfair.
DISEASES OF WOMEN -- Peaslee,.....	Thomas.

REQUIREMENTS FOR GRADUATION.

The candidate must be twenty-one years of age, and exhibit certificates from a physician or surgeon, duly authorized by law to practice his profession, that he has studied medicine and surgery under his instruction during a term of three years.

He must have attended two full courses of lectures, the last of which must have been at this institution.

He must be of good moral character.

He must deliver to the Registrar, six weeks before the end of the term, a Thesis, written by himself on some medical subject, and be prepared to defend it at his examination.

He must pass a satisfactory examination in the several branches of medicine and surgery.

Final examinations will be conducted chiefly in writing, by a series of questions on the different branches taught, and are intended to be thorough, but just to the student.

Regular and punctual attendance is required, and certificates of actual attendance, given at the end of the term.

JACOB S. MOSHER, M.D., *Registrar*,

3 Lancaster St., Albany, N. Y.

January, 1879.

EXAMINATIONS.

STUDENTS WHO HAVE ATTENDED TWO FULL COURSES OF LECTURES ON ANATOMY, PHYSIOLOGY, MATERIA MEDICA AND CHEMISTRY MAY BE EXAMINED ON THOSE SUBJECTS, AND, IF GIVING SATISFACTORY EVIDENCE OF PROFICIENCY IN THEM, WILL BE EXAMINED ONLY ON THE OTHER BRANCHES AT THE END OF THEIR THIRD COURSE.

Monthly written examinations of the Graduating Class were held last term, and are to be continued hereafter. Copies of the questions for 1878, can be had on application to the Registrar.

EXAMINATION PAPERS, JANUARY, 1879.

THEORY AND PRACTICE OF MEDICINE.

PROFESSORS VANDER POEL, MOSHER, GRAY, AND E. R. HUN.

1. What is diphtheria !
2. What are its pathological manifestations general and local in their appearance, and sequence ?
3. What the diagnostic conditions from scarlet fever ?
4. What are the indications of treatment, general and local ?
5. What is the difference between croupous and catarrhal pneumonia ?
6. State whether catarrhal pneumonia is a primary or secondary affection, also the steps of the morbid process which occur in the alveoli.
7. State the ages and conditions of the system under which it occurs, also the progress and curability as compared with croupous pneumonia.
8. State its relations to pulmonary phthisis.
9. State the relations of symptoms with the changes which occur in the intestines during typhoid fever.
10. What is the course of treatment in typhoid fever ?
11. What is fermentation and what are its relations to disease ?
12. Give the atmospheric causes of, and relations to disease.
13. What are the hygienic relations of the water supply to a city ?
14. How determine between apparent and real death ?
15. What is insanity ?

16. What is the classification of insanity?
17. Describe the membranes of the brain, their mutual relation to each other and their relation to the inner surface of the skull cap and to the convolutions.
18. If one lateral half of the spinal cord should be divided in the dorsal region, what form of paralysis would exist in the lower extremities?
19. Describe an epileptic attack, "Grand Mal" and Petit Mal.
20. Describe an attack of tetanus.

SURGERY AND OPHTHALMOLOGY.

PROFESSORS SWINBURNE, VAN DERVEER, WARD AND MERRILL.

1. What do you understand by subjective and objective symptoms? Define diathesis.
2. What special senses do we make use of in reaching a surgical diagnosis? And how do we employ them?
3. Define Lupus, and give its symptoms, classification and methods of treatment.
4. Give the kinds, symptoms and treatment of deep seated ulcers of the tongue.
5. What are the surgical affections that call for tracheotomy? Describe the steps of the operation.
6. Define clefts of the hard and soft palate, and give the methods of operating for their cure.
7. Describe the symptoms, and give the pathology and treatment of Epithelioma.
8. Define anæsthetics and enumerate those now employed. State what objects are attained by their use and give instances. How may death occur during their administration? What are the warnings of danger and how must they be met?
9. Discuss the subject of surgical fever, its cause, symptoms, prognosis and treatment?
10. Enumerate the diseases to which granulations are liable and state how each must be treated.
11. State briefly the conditions of healthy nutrition of the tissues.
12. What kinds of degeneration may accompany atrophy?

13. What are the obstacles to healing by the first intention?
14. What is the source of pus-cells, and how do they look under the microscope when alive, when dead, and after the addition of acetic acid?
15. What are the principles necessary to be observed in the treatment of fractures of the long bones in order to ensure the greatest success?
16. How does the treatment in gun-shot fractures differ from fractures induced by other causes?
17. In gun-shot fractures of the long bones, what are the conditions which necessitate amputation of the limb?
18. Give the symptoms and treatment of a corneal abscess.
19. What are the conditions of an eye, that are most apt to cause sympathetic trouble?
20. Define emmetropia, hypermetropia and myopia.

PHYSIOLOGY.

—
PROFESSOR WEBSTER.
—

1. Location and function of the various valves of the body?
2. Structure and function of the largest and smallest arteries compared?
3. Difference in origin between blood capillaries and lymph capillaries?
4. Structure and function of the red blood corpuscles?
5. The pulse?
6. In what does the change from arterial to venous blood consist?
7. Describe the mechanism of inspiration.
8. Phenomena and function of coagulation?
9. Function of the kidneys?
10. Functions of the liver?
11. How is the heat of the body regulated?
12. Chief source of gain to the blood?
13. Digestion and absorption of fats?
14. Distribution of the sense of touch?
15. Structure and distribution of the papillæ of the tongue?

16. Distribution of the olfactory nerve?
17. Location and function of the fibres of Cortes?
18. Mention the parts of the eye, giving function of each (briefly).
19. Trace sensory impulses from without inward.
20. Follow motor impulses from within outward?

CHEMISTRY.

PROFESSORS PERKINS AND TUCKER.

1. Where is glucose found?
2. Give tests for its presence.
3. What is the source of the common alcohols?
4. What is fusel oil?
5. Give reaction for starch?
6. What is an anide?
7. What is a compound ether?
8. What is dextrine?
9. What is the effect of heat and acids upon albumen?
10. Give source and characteristics of acetic acid?
11. What is ozone? Describe at least one method of preparation and give its properties and test by which it may be recognized.
12. What is the difference between 'ammonia' and 'ammonium'?
13. From what source is iodine obtained? Describe it as fully as possible.
14. What is the symbol and chemical name of 'sulphuretted hydrogen'; where does it occur in nature and what are its properties?
15. From what source is phosphorous obtained?
16. Describe the most important allotropic modification of phosphorous?
17. What do you understand by "combustion"?
18. Write the symbols of all the potassium compounds you can.
19. What colors do compounds of K, Na, Ba, Ca and Cu, impart to the flame?
20. Give the properties of aluminum. What is "alum"?

MATERIA MEDICA AND THERAPEUTICS.

PROFESSOR BIGELOW.

1. What is the action of digitalis on the heart and arterioles — how do you explain it? What medicines antagonize the action of digitalis? At what stage of aortic regurgitation is digitalis contra-indicated? When should digitalis be administered, and in what form is it best prescribed?

2. What medicinal agents paralyze the respiratory centers? What medicinal agents stimulate the respiratory centers?

3. Describe the different stages of anæsthesia by chloroform and ether; the modes of death by each; the means employed for resuscitation from the dangerous symptoms of anæsthesia.

4. What expectorants would be best employed in a case of severe acute bronchitis, for the relief of embarrassed respiration, and to make the mucus less tenacious?

5. Mention the principal medicines and their doses, used for hypodermic injection and describe the mode of performing the operation?

6. In a case of ague, when the patient cannot take Peruvian bark nor quinine in any form, what drugs would you recommend?

7. Mention the various drugs which produce eruptions on the skin and describe the forms of eruption produced.

8. What remedies would you employ in a case of renal dropsy, when comatose symptoms threaten?

9. What are the principal cholagogue cathartics? Describe their action.

10. What is denutrition? In what diseases may it be employed?

11. State the best remedies for nocturnal incontinence of urine?

12. Describe your treatment of puerperal convulsions.

13. Write a prescription for the cough of phthisis which shall include chlorate of potash, morphia, hydrocyanic acid diluted, and other ingredients — dose, téaspoonful.

14. What remedies would you use in the treatment of acute rheumatism? Why?

15. What is the theory of the action of mercury in syphilis? When and in what forms should it be administered?

16. What are the doses of tinct. aconite rad; tr. verat. viridis; tr. colchici seminis? tartar emetic? turpeth mineral? elaterium? gamboge? iodide of iron?

17. What remedies are best employed to relieve chordee?
18. What remedies are prescribed for the removal of the *ascaris lumbricoides* (round worms)? Doses?
19. What remedies are used to relieve the vomiting of pregnancy? Doses? .
20. How would you treat a patient suffering from pleuritic effusion?

ANATOMY, HISTOLOGY AND PATHOLOGY.

PROFESSORS BALCH AND HAILES.

1. Describe the humerus; give muscular attachments and points of surgical interest.
2. Describe in the same manner the tibia.
3. What muscles form the "quadriceps extensor?" Give the origin of each, the manner of insertion, and action.
4. Describe the gastrocnemius and soleus, with the points of surgical interest.
5. Describe the common carotid on the left side, the difference in origin from the right; the guide for a place where it can be tied, with the branches and distribution of the external and internal carotids.
6. Describe the brachial artery with its branches and their distribution.
7. Describe the formation of the knee joint, and how flexion and extension are controlled.
8. Describe in the same manner the elbow joint.
9. Give the reflexions of the peritoneum.
10. Give the general anatomy of the liver, with its blood supply.
11. Describe the three embryonic layers, and give the kinds of tissue and organs arising from each.
12. Describe cartilage and bone, and give the processes of ossification.
13. Give histology of lungs.
14. Describe the course of a urinary tubule from Bowman's capsule to the pelvis of the kidney and give the various kinds of epithelium lining it.

15. Describe nerve tissue.
16. Describe the various kinds of degenerations and give examples of each.
17. Describe catarrhal, croupous, and diphtheritic inflammations.
18. Describe necrosis, and give process of repair.
19. Define a tumor, and give histological classification.
20. Define sarcoma, carcinoma and epithelioma, and give microscopic appearances.

Each student will be required to examine and diagnose several microscopic preparations.

OBSTETRICS AND GYNECOLOGY.

PROFESSOR BOYD.

1. Describe the chorion.
2. Describe the Fallopian tubes.
3. Describe the Graafian follicle.
4. Describe the sutures of foetal skull.
5. What is the condition of the blood of a pregnant woman?
6. Give signs of pregnancy at fifth month.
7. Give rules for management of third stage of labor.
8. Give rules for management of a dorso-anterior presentation of arm, bag of waters being ruptured.
9. What deformities of the pelvis are caused by rachitis?
10. Give rules for management of placenta prævia before, and after seventh month.
11. Give symptoms of pulmonary thrombosis.
12. Describe the operation of craniotomy.
13. What is pudental hematocele?
14. Give some of the causes of amenorrhœa.
15. Give treatment for different forms of dysmenorrhœa.
16. What is metrorrhagia?
17. Give treatment for retroversion.
18. How would you determine the presence of a cyst of the vaginal gland?
19. Give treatment for the same.
20. What is the average weight of the foetus at the end of pregnancy?

STUDENTS OF 1878-9.

DUDLEY OBSERVATORY, ALBANY.

ASTRONOMICAL DEPARTMENT.

This Department was reorganized in the summer of 1876. The instruments are now actively employed in astronomical observation. The buildings and scientific apparatus belonging to the observatory have undergone important improvements, and there is every probability of a considerable extension of scientific operations in the near future.

Personal Establishment:

PROF. LEWIS BOSS, A.M., Director.

OLIVER H. LANDRETH, A.B., Assistant.

METEOROLOGICAL DEPARTMENT.

This Department has been in charge of the chief signal officer, U. S. Army (Gen. A. J. MYER), since Dec. 1873 and a complete record of the weather kept. This is a distributing centre for over 300 post office Farmer's Bulletins (indications).

S. W. BEALL, Sergeant in charge with two assistants.

SCHOOL OF CIVIL ENGINEERING

OF

UNION COLLEGE, SCHENECTADY, N. Y.

The object of this Department, which was organized in UNION COLLEGE in 1845, is to give its Students such instruction in the Theory and Practice of CIVIL ENGINEERING as to qualify them for immediate usefulness in the field and office in subordinate relations, and at the same time to fit them to fill satisfactorily the higher positions in the profession after a moderate amount of experience in the routine of practice.

The thoroughness and completeness of the course of instruction, the unsurpassed excellence of its illustrative apparatus, the opportunities and arrangements for field practice, the moderate charges (\$25 per term), and the fact that Students have access without further charge to the teachings of the other departments, commend the course to those contemplating the Engineering profession.

For circulars, or specific information, address

PROF. CADY STALEY or

PRESIDENT E. N. POTTER, D.D.

Association of the Alumni

OF THE

Albany Medical College

Incorporated February 6th, 1874.

This Association was organized January 20, 1874. The membership consists of the officers and graduates of the College. Total number of graduates, 1405. Names and addresses upon the roll 877. The object of the Association is to promote the interests of the College in the work of medical education, and to cultivate social intercourse among the alumni. The annual meeting is held upon the afternoon of commencement day. The officers of the Association are elected annually.

Officers for 1879.

PRESIDENT,

Dr. ISAAC G. COLLINS, Sing Sing, N. Y. ('58).

VICE-PRESIDENTS,

Dr. WM. H. BAILEY, Albany, N. Y. ('53). Dr. WILLIAM H. ROBB, Amsterdam, N. Y. ('65).
 Dr. MARVIN R. PECK, Glens Falls, N. Y. ('61). Dr. ANTHONY P. TEN Eyck, De Freestville, N. Y. ('66).
 Dr. JOHN H. DORN, New York City ('64).

SECRETARY,

Dr. WILLIS G. TUCKER, Albany ('70).

TREASURER,

Dr. GEBHARD L. ULLMAN, Albany, ('71).

HISTORIAN,

Dr. JNO. BEN. STONEHOUSE, Albany ('71).

EXECUTIVE COMMITTEE,

Dr. JAMES H. SCOON, Amsterdam, N. Y. ('49). Dr. DANIEL H. COOK, Albany ('73).
 Dr. JACOB S. MOSHER, Albany ('63). Dr. T. KIRKLAND PERRY, Albany ('75).
 Dr. PETER M. MURPHY, Albany ('63). Dr. JAMES F. BARKER, Albany ('77).
 Dr. HARVEY W. BELL, East Albany ('66). Dr. ROBERT J. CULLEN, Amsterdam, N. Y. ('77).
 Dr. BYRON U. STEENBERG, Albany ('70). Dr. THOMAS R. FEATHERSTONHAUGH, Schenectady, N. Y. ('77).
 Dr. EUGENE VAN SLYKE, Albany ('71).

The next annual meeting will be held in the College building, on Wednesday March 3d, 1880, at half-past two P. M. The Alumni Dinner will take place in the evening, upon the close of the commencement exercises. So far as their addresses can be ascertained, all graduates of the College are notified of the annual meetings through the mail. Those who do not receive such notice regularly are requested to furnish the Secretary with their addresses and to keep him informed of any change in their place of residence. The yearly dues are fixed at one dollar. This may be sent to Dr. G. L. Ullman, Treasurer, No. 71 Central avenue, Albany, N. Y.

ISAAC G. COLLINS, M.D.,
President.

WILLIS G. TUCKER, M.D., *Secretary.*
 Albany Medical College, Albany, N. Y.

HOSPITALS.

The following Hospitals, by regulation of their Governing Boards, are made available for clinical purposes to the students :

ALBANY HOSPITAL, Howard Street, corner of Eagle Street.

Medical and Surgical Staff:

Consulting Physicians, T. HUN, M.D., S. O. VANDER POEL, M.D.

Surgeons, A. VAN DERVEER, M.D., L. BALCH, M.D., S. B. WARD, M.D., W. H. HAILES, M.D.

Physicians, J. S. MOSHER, M.D., S. H. FREEMAN, M.D., J. M. BIGELOW, M.D., J. LEWI, M.D.

Obstetrician, W. H. BAILEY, M.D.

Gynecologist, J. P. BOYD, JR., M.D.

Neurologist, E. R. HUN, M.D.

Dermatologist, F. C. CURTIS, M.D.

Ophthalmologists and Aurists, C. A. ROBERTSON, M.D., C. S. MERRILL, M.D.

Resident Physician and Surgeon, O. J. HALLENBECK, M.D.

Assistant Resident Physician and Surgeon, THOMAS B. VANALSTYNE, M.D.

Apothecary, SHELDON VOORHEES, M.D.

ST. PETER'S HOSPITAL, cor. North Broadway and North Ferry Street

Medical and Surgical Staff.

Consulting Physicians, T. HUN, M.D., S. O. VANDER POEL, M.D.

Consulting Surgeon, J. SWINBURNE, M.D.

Physicians, E. R. HUN, M.D., J. P. BOYD, JR., M.D., F. C. CURTIS, M.D., J. M. BIGELOW, M.D.

Surgeons, A. VAN DERVEER, M.D., L. BALCH, M.D., S. B. WARD, M.D., J. S. MOSHER, M.D.

Ophthalmic, and Aural Surgeons, C. A. ROBERTSON, M.D., C. S. MERRILL, M.D.

Assistant Physicians, and Surgeons, T. M. TREGO, M.D., A. W. KILBOURNE, M.D.

Resident Physician, J. P. CURLEY, M.D.

COUNTY HOSPITAL.

Physician and Surgeon, D. V. O'LEARY, M.D.

Resident Physician, FREDERICK T. MORRILL.

EAR AND EYE RELIEF.

Surgeon, C. A. ROBERTSON, M.D.

Assistant Surgeon, W. H. F. REYNOLDS, M.D.

Rhinoscopist and Laryngoscopist, F. C. CURTIS, M.D.

Electro-Therapeutist, JNO. BEN. STONEHOUSE, M.D.

UNION UNIVERSITY.

ANNUAL ANNOUNCEMENT.

SECOND EDITION.

ALBANY:
MUNSELL, PRINTER.

1880.

H.A.

CALENDAR.

The Collegiate Year includes a special Spring Course, and a regular Session. Attendance at the Spring lectures is optional, but is advised to the student. Attendance at the Winter Course, commencing in October, is requisite for graduation.

The Spring Course for 1881, commences April 5th and continues 8 weeks. No Preliminary Examination is required for this course which is free to matriculants. The Winter Session for 1880-81, commences October 6th, and continues 20 weeks. The Preliminary Examination for this session will be held during the first week of the session. For Preliminary and other Examinations see next page.

Students can matriculate at the commencement of either session.

1880.

Union University includes the Albany Medical College and Law School, the Dudley Observatory at Albany and Union College at Schenectady.

Recent changes made in the course of study and requirements for graduation which look to a higher standard for medical degrees, have been favorably received by the profession; the Faculty were gratified in seeing that the class for 1878-79 was so much larger than ever before in the history of the institution, as notably to indicate the favor with which the Alumni and friends of the College regard these efforts for higher grade; the present class shows that the increased attendance is permanent. In pursuance of the same policy, it has been determined that WITH THE SESSION OF 1880-81 AND THEREAFTER, A THREE YEARS GRADED COURSE SHALL BE AN ABSOLUTE REQUISITE FOR GRADUATION IN THIS COLLEGE.

The College Building, situated on Eagle street is a fine, large edifice well appointed in its lecture rooms, laboratories, dissecting room and library.

The location of the College at Albany is such as to afford advantages not surpassed in any other city. In so large and busy a place there is never any lack of material for the illustration of clinical medicine and surgery, and the material for practical anatomy fully meets the requirements of the classes.

The Museum is especially rich in its anatomical preparations. It contains the valuable morbid specimens accumulated by the late Drs. March, Armsby and McNaughton, and is unequalled in their variety and rarity and in its models. The library of the College contains nearly 5,000 volumes, and arrangements are being made for its constant increase.

The aim of the Faculty is to make the course practical, and scientific. This is done by combining with didactic lectures, clinical lectures, recitations and practical work in the laboratories and dissecting room; Clinical Instruction is made an especial feature of the course.

The Albany Hospital, St. Peter's Hospital, Eye and Ear Relief and the County Hospital, together with the Eye and Ear Infirmary and the Dispensaries connected with each, are, by the regulations of their governing boards, made available for clinical purposes to the students.

The appointments to positions in the Hospital as Resident physician and surgeon, Assistant Resident and Apothecary, are annually made, and are competed for by members of the graduating class.

Members of any other department of the University have the right to attend medical lectures without the payment of additional fees. Undergraduates intending to study medicine are advised to pay attention more especially to the division of studies, as indicated in the regulations concerning Primary and Practical branches on page 5.

MEDICAL REGULATIONS.

PRELIMINARY EXAMINATION.

Graduates from recognized Colleges, Scientific Schools or Medical Institutions, will not be required to pass the preliminary examination on joining the school.

All others will be required to pass an examination, by a page written at the time of which the orthography, grammatical construction, and penmanship will be considered, and in arithmetic, grammar, geography, and elementary physics. The ordinary school text books may be used in preparing for the examination and in physics Peck's Ganot, or its equivalent is recommended.

MONTHLY WRITTEN EXAMINATIONS of the candidates will be held at regular intervals during the term. A printed schedule of the times for these examinations is furnished the class.

EXAMINATION IN PRIMARY STUDIES. Students who have attended two full courses of lectures on Anatomy, Physiology, Materia Medica and Chemistry may be examined on those subjects, and, if giving satisfactory evidence of proficiency in them, will be examined on the other branches at the end of their third course.

COURSE OF INSTRUCTION. *Anatomy* is taught by lectures, recitation and demonstration, dissection being required before a student can be admitted to final examination. Great attention is paid to study in Practical Anatomy, under the direction of the professor and demonstrator of this department.

LABORATORIES. *Practical Chemistry.*

THE WORKING LABORATORY FOR PRACTICAL CHEMISTRY is open during the entire year. Students are received singly or in classes, for instruction in Chemical Analysis and Medical Chemistry. The instruction given is in harmony with the lectures on chemistry delivered during the term, and is so conducted as to secure to the student a practical familiarity with the apparatus, materials, processes and reactions which are the subjects of his professional study, and which are to be employed in his subsequent practice. With this practical instruction is combined a study of the principles of theoretical chemistry, chemical notation, nomenclature, etc.

The Laboratory is well lighted and conveniently arranged. Each student has a desk and chemicals for his own use and is supplied with all necessary apparatus. During the lecture course the Laboratory classes are so arranged as not to interfere with the lectures and other college exercises. Students are urged to avail themselves of the privileges thus afforded, and if possible, during their first course of lectures.

Pathological Anatomy and Histology.

The study of minute anatomy, in the first instance by microscopes, is aided by illustrations before the class by means of improved cameras with oxyhydrogen lights. A photographic gallery is connected with the hospital, in which specimens of healthy and morbid minute issues are photographed upon glass and subsequently used for class illustrations. A set of Dr. Woodward's celebrated slides, made at the United States Army Medical Museum, Washington, has been added to the large collections in possession of the college. The Laboratory courses are under the direction of the professor of that department and are adapted so that practical and thorough investigations can be made without interference with other studies during the course.

Classes in Embryology, Histology and Pathology, will be formed. Each course to consist of twelve lessons, and all necessary material, reagents and microscopes furnished.

FEES AND EXPENSES.

All fees are payable in advance. For matriculation, five dollars payable each year; for the year's lectures, one hundred dollars. Perpetual lecture ticket, one hundred and fifty dollars. Students who have attended two full courses of lectures at this college, will be required to pay only the matriculation fee. Students who have attended two full courses of lectures at other accredited medical colleges, will be required to pay twenty-five dollars and the matriculation fee. Graduates of this institution have perpetual free admission. Graduates of other medical schools will be admitted after paying the matriculation fee. Dissection, ten dollars, which is required the first year and optional during other years of the course; dissecting material is free, and there are no incidentals in this department. The graduation fee is twenty-five dollars, which must be paid to the registrar before the candidate can be admitted to an examination. Laboratory courses ten dollars each. Spring lecture course free to matriculants.

SUMMARY OF FEES FOR THREE YEARS.

FIRST YEAR:

For Matriculation,	\$ 5
" Lecture Tickets,	100
" Dissection,	10

SECOND YEAR:

For Matriculation,	\$115
" Lecture Tickets,	\$ 5
	100
	<hr/>
	\$105

THIRD YEAR:

For Matriculation,.....	\$ 5
“ Graduation,.....	25
	<hr/> \$30

Total fees for graduation with three courses of lectures, \$250.

The student by purchase of the Perpetual Lecture Ticket will reduce this amount to \$200.

OTHER FEES OPTIONAL WITH THE STUDENT.

Matriculation for additional courses, (each year)...	\$ 5
Additional courses of dissection, (each year),.....	10
Chemical Laboratory, (each course),.....	10
Laboratory course in Histology, (each course),.....	10

The other expenses of the student may be reduced in accordance with his means, and living expenses may be made more economical in Albany than in most other large cities. The janitor of the Medical College has a list of boarding houses where board can be obtained from four to six dollars a week, and also of rooms in the vicinity of the college, where, by adopting the English plan of lodgings, the student's expense for living can be brought within even lower rates without any sacrifice of comfort. This plan has been adopted by many students and several mess clubs are organized annually.

BOOKS RECOMMENDED.

For Text Books.	Books Recommended for Reference.
ANATOMY—Gray,	Wilson, Holden, Holden's Osteology,
HISTOLOGY—Stricker, ..	Frey. [Sharpey and Quain.
PATHOLOGICAL ANATOMY—Greene, ..	Wagner.
PHYSIOLOGY—Huxley,	Flint, Dalton, Marshall.
MAT. MED. AND THERAP.—Bartholow, ..	Ringer, U. S. Dispensatory, Stille....
CHEMICAL PHILOSOPHY—Fownes, ...	
ORGANIC CHEMISTRY—Fownes,	Dewar.
INORGANIC—Miller's Introduction,	Bloxam, Fownes.
ANALYTICAL CHEMISTRY—Crafts,	Fresenius.
CHEMISTRY OF URINE—Legg, Tyson,	Thudichum.
THEORY AND PRACTICE—Flint,	[Reynolds.
MEDICAL JURISPRUDENCE—Taylor,	Watson, Niemeyer, Bristow, Aitkin,
HYGIENE,	Ordonaux, Beck, Wharton and Stillé.
PSYCHOLOGICAL MEDICINE—Griesinger, ..	Parkes.
DISEASES NERVOUS SYSTEM—Clymer, ..	Bucknill & Tuke, Blanford.
	Mitchell, Jackson.
FRACTURES & DISLOCATIONS—Hamilton, ..	Gross, Holmes.
PRIN. AND PRACT. OF SURGERY—Bryant, ..	Gross, Holmes, Erichsen.
SURGICAL PATHOLOGY—Billroth,	Paget.
OPERATIVE SURGERY—Smith's H'dbook, ..	Bernard & Huette.
OPHTHALMOLOGY,	Wells, Stellwag.
OBSTETRICS—Leishman,	Cazeaux, Playfair.
DISEASES OF WOMEN,	Thomas.

REQUIREMENTS FOR GRADUATION.

The candidate must be twenty one years of age, and exhibit certificates from a physician or surgeon, duly authorized by law to practice his profession, that he has studied medicine and surgery under his instruction during a term of three years.

He must have attended two full courses of lectures, the last of which must have been at this institution.

He must be of good moral character.

He must deliver to the registrar, six weeks before the end of the term, a thesis written by himself on some medical subject, and be prepared to defend it at his examination.

He must pass a satisfactory examination in the several branches of medicine and surgery.

Final examinations will be conducted chiefly in writing, by a series of questions on the different branches taught, and are intended to be thorough, but just to the student.

Regular and punctual attendance is required, and certificates of actual attendance, given at the end of the term.

JACOB S. MOSHER, M.D., *Registrar*,
3 Lancaster St., Albany, N. Y.

January, 1880.

EXAMINATION PAPERS.

THEORY AND PRACTICE.—PROFESSORS VANDER POEL,
MOSHER AND GRAY.

What is the element which is probably the proximate cause of typhoid fever?

State some of the principal modes by which it gains entrance into the system.

What complication is most to be feared as a sequence to measles?

What sequence to scarlet fever is most to be feared?

What part of the lung is the place of election for croupous pneumonia?

What are some of the points in the differential diagnosis of croupous and catarrhal pneumonia?

What part of the lung is primarily involved in pulmonary phthisis?

What are the signs derived from inspection—percussion, and auscultation in the earliest stages?

What does a systolic murmur, heard loudest at the base of the heart, indicate—and what a diastolic murmur at the same place?

What do the same murmurs heard at the apex mean?

State some of the points in differential diagnosis between perforating ulcer of the stomach and cancer of that organ.

What is the general previous history—what the symptoms—what the complications, and what the pathological appearance of the red granular kidney?

State facts concerning the toxical qualities of the compounds of lead.

What, at the bedside of a patient would lead you to suspect poisoning by arsenic? i. e. symptoms and bedside tests of the poison.

Treatment for poisoning by arsenic?

What do you know of *rigor mortis*? when does it appear, its cause and duration?

Proofs of death.

Name five infectious diseases and give the hygienic treatment for one of them.

Name three infectious diseases which are not contagious.

Cause of secondary fever in small-pox.

Cause of the fever in the exanthemata.

Why does one attack of measles protect from it afterward.

SURGERY AND OPHTHALMOLOGY.—PROFESSORS VAN DER-VEER, WARD AND MERRILL.

Give the classification, symptoms, diagnosis and treatment of stricture of œsophagus.

Give symptoms and treatment of penetrating wounds of the chest.

Give the causes, symptoms, possible dangers and treatment of fracture of the ribs.

Give the symptoms and treatment of acute abscess of frontal sinus.

Describe Ferguson's incision for removal of upper jaw.

Give the differential diagnosis of hydrocele.

How would you treat a stricture of small caliber in the spongy portion of the urethra?

How, when situated in the membranous portion of the urethra?

Who first used sulphuric ether as an anæsthetic during a surgical operation; when and where?

Give the names of the other anæsthetics sometimes used, and the objections to each in ordinary cases.

What are the conditions of healthy nutrition of a part?

Describe granulation tissue, and its appearance in wounds that are healing by first intention, and in those that are suppurating.

What is a white blood corpuscle, and what may possibly become of it during an inflammatory process?

Describe the usual post-mortem appearances after death from pyæmia.

How would you treat a hæmatoma, and in what may it possibly terminate?

What are the specific objects to be attained in operating for fracture of the skull?

Give the boundaries of the cavities filled by the aqueous humor.

Give the symptoms and treatment of ophthalmia neonatorum.

What are the indications for performing an iridectomy.

What is a cataract and how are they treated?

PHYSIOLOGY.—PROFESSOR WEBSTER.

Function of the blood plasma?

Function of red corpuscles?

Secretions by which food is acted upon, with origin and functions of each?

Function of the capillaries of the gastric mucous membrane?

Course pursued by digested fat on its way to the heart?

Changes in blood in respiration?

Functions of the liver?

Touch?

Parts of the ear from without; function of each part?

Same of the eye from before?

Course of the afferent and efferent impulses in the cord and medulla oblongata.

CHEMISTRY.—PROFESSORS PERKINS AND TUCKER.

What elements are always present in organic compounds?

What is a carbo-hydrid?

What is a homologous series?

What effect upon the boiling point does the addition of $C H_2$ have?

What bodies are found in the paraffin series.

How are ordinary ethers derived from the members of the paraffin series?

How can the monatomic alcohols be derived from the same series?

What is meant by absolute alcohol?

Write methyl $C H_3$ amine (formula.)

Write Carbamide or Urea formula.

What change does Carbamide undergo in the presence of ferments?

What is the test for the presence of glucose.

Define elements, compounds and mixtures, and give examples of each.

Define combustion of H , marsh gas and $H_2 S$, in the air.

Give brief account of gaseous diffusion.

Write the reactions which occur when limestone is burned, and quicklime slacked.

By what process is $C O_2$ constantly added to the air and how is it ultimately disposed of?

Give some of the general characters of the metals.

What is nitre? give some of its properties and uses.

Name some of the natural lime compounds and state their modes of occurrence and uses.

In what three forms is iron used in the arts and what is the difference in their chemical composition?

How can you distinguish ferrous (proto) salts from ferric (per) salts of iron.

MATERIA, MEDICA AND THERAPEUTICS.—PROF. BIGELOW.

What are the doses of the different officinal preparations, the modes of absorption, the modes of elimination, the physiological and therapeutical actions; of *veratrum viride*? opium? bromides? salicylic acid? *digitalis*? iodine and its compounds? mercury; iron? phosphorus? electricity? heat? cold? alkalies?

ANATOMY, HISTOLOGY AND PATHOLOGY.—PROFS. BALCH AND HAILES.

Describe the scapula, and give muscular attachments.

Describe the frontal bone.

Give origin, insertion, and action of the *serratus magnus*.

Describe in same manner the *sterno-cleido mastoideus*, and state what point of surgical interest there is about it.

Describe the elbow joint.

“ “ hip “

Give origin, course and branches of the internal carotid.

Describe in same manner the brachial, stating what nerve accompanies it.

Where would you compress the internal pudic artery if it was wounded in the perineum.

If an abscess is formed in the ischio-rectal fossa, how deep could you pass the knife without wounding other parts.

Describe a cell, give varieties and genesis.

Give classification of epithelium, location and embryonic origin.

What tissues belong to the connective tissue groups, and from which embryonic layer do they arise.

Give histology of lymphatics.

Give minute anatomy of the kidney.

Describe mucoid, colloid, and fatty degenerations, and give examples.

What is meant by benign growths, and give classification.

Define a carcinoma and give varieties.

Describe embolism and explain what a hæmorrhagic infarctus.

What constitutes a sarcoma?

OBSTETRICS AND GYNECOLOGY.—PROFESSOR BOYD.

How would you recognize and what would you do in a presentation of (a) face (b) funis (c) hand, (d) foot.

Describe the progress of labor in a face presentation when chin is towards sacrum.

What are the causes of post partum hæmorrhage.

Give causes of dysmenorrhœa.

Give causes, pathology, symptoms, physical signs, and results of pelvic cellulitis; also the treatment.

DUDLEY OBSERVATORY, ALBANY.**ASTRONOMICAL DEPARTMENT.**

This Department was reorganized in the summer of 1876. The instruments are now actively employed in astronomical observation. The buildings and scientific apparatus belonging to the observatory have undergone important improvements, and there is every probability of a considerable extension of Scientific operations in the near future.

Personal Establishment :

Director — PROF. LEWIS BOSS, A.M.

First Assistant — THEODORE DECUE PALMER, C.E.

Second Assistant — RICHARD H. TUCKER, C.E.

Computer — ADDISON J. EDGERTON, A.B.

Visitors are admitted only on Tuesday evenings, from 8 o'clock to 10, and on passes obtainable from members of the Board of Trustees

SCHOOL OF CIVIL ENGINEERING

OF

UNION COLLEGE, SCHENECTADY, N. Y.

The object of this Department, which was organized in UNION COLLEGE in 1845, is to give its students such instruction in the Theory and Practice of CIVIL ENGINEERING as to qualify them for immediate usefulness in the field and office in subordinate relations, and at the same time to fit them to fill satisfactorily the higher positions in the profession after a moderate amount of experience in the routine of practice.

The thoroughness and completeness of the course of instruction, the unsurpassed excellence of its illustrative apparatus, the opportunities and arrangements for field practice, the moderate charges (\$25 per term), and the fact that students have access without further charge to the teachings of the other departments, commend the course to those contemplating the engineering profession.

For circulars, or specific information, address

PROF. CADY STALEY or

PRESIDENT E. N. POTTER, D.D., LL.D.

Association of the Alumni OF THE Albany Medical College,

Incorporated February 6th, 1874.

This Association was organized January 20, 1874. The membership consists of the officers and graduates of the College. Total number of graduates, 1451. Names and addresses upon the roll 871. The object of the Association is to promote the interests of the College in the work of medical education, and to cultivate social intercourse among the alumni. The annual meeting is held upon the afternoon of commencement day. The officers of the Association are elected annually.

Officers for 1880.

President—DR. FRANCIS R. L. CHAPIN, Glens Falls, N. Y. ('51).

Vice Presidents—DR. THOMAS S. DAWES, Sangerties, N. Y. ('48); DR. IANTHUS G. JOHNSON, Greenfield Centre, N. Y. ('53); DR. JOHN E. BURDICK, Rockwood, N. Y., ('63); DR. HENRY H. SMITH, Sheffield, Mass. ('73); DR. R. GRANT HAVENS, Jefferson, N. Y. ('74).

Secretary—DR. WILLIS G. TUCKER, Albany, N. Y. ('76).

Treasurer—DR. GEBHARD L. ULLMAN, Albany, N. Y. ('71).

Historian—DR. JNO. BEN. STONEHOUSE, Albany, N. Y. ('71).

Executive Committee—DR. BARENT A. MYNDERSE, Schenectady, N. Y. ('53); DR. JACOB S. MOSHER, Albany, N. Y. ('63); DR. GIDEON H. ARMSBY, Albany, N. Y. ('64); DR. DANIEL C. CASE, Singersland, N. Y. ('70); DR. CHARLES M. LEFLER, Johnstown, N. Y. ('70); DR. BYRON U. STEENBERG, Albany, N. Y. ('70); DR. CHARLES E. JONES, Albany, N. Y. ('72); DR. WILLIAM GEOGHAN, Albany, N. Y. ('73); DR. WILLIAM N. HAYS, Albany, N. Y. ('75); DR. WILLIAM STEVENS, Cairo, DR. THOMAS R. FEATHERSTONHAUGH, Albany, N. Y. ('77).

The next annual meeting will be held in the College building, on Wednesday, March 1st, 1881, at half-past two P. M. The Alumni Dinner will take place in the evening, upon the close of the commencement exercises. So far as their addresses can be ascertained, all graduates of the College are notified of the annual meetings through the mail. Those who do not receive such notice regularly are requested to furnish the Secretary with their addresses and to keep him informed of any change in their place of residence. The yearly dues are fixed at one dollar. This may be sent to Dr. G. L. Ullman, Treasurer, No. 71 Central avenue, Albany, N. Y.

FRANCIS L. R. CHAPIN, M.D.,
President.

WILLIS G. TUCKER, M.D., *Secretary*,
Albany Medical College, Albany, N. Y.

HISTORICAL LIST OF THE COLLEGE FACULTY.

EBENEZER EMMONS, M.D.,.....	Chemistry and Natural History, 1838 to 1839. Materia Medica and Natural History, 1840 to 1843. Obstetrics and Natural History. 1843 to 1853. Emeritus Prof. Obstetrics and Natural History. 1853 to 1854.
JAMES H. ARMSBY, M.D.,.....	Anatomy and Physiology,.... 1838 to 1839. Anatomy, 1840 to 1869. Principles and Practice of Surgery, [died], 1870 to 1875. Theory and Practice of Medicine, 1839 to 1840.
ALDEN MARCH, M.D.,.....	Surgery, .. [died], 1839 to 1869.
HENRY GREENE, M.D.,.....	Obstetrics & Diseases Women and Children,..... 1838 to 1839.
DAVID M. MACLACHLAN, M.D.,....	Materia Medica and Pharmacy, 1838 to 1839. Materia Medica and Therapeutics, 1839 to 1840. Diseases Women and Children, 1840 to 1842. Medical Jurisprudence, 1839 to 1859.
AMOS DEAN, Esq.,.....	Emeritus Prof. Med. Jur., [d.], 1867 to 1868.
THOMAS HUN, M.D.,	Institutes of Medicine,.... 1839 to 1853. Institutes of Medicine and Materia Medica, 1853 to 1855. Institutes of Medicine, 1853 to 1859. Emeritus Prof. Institutes of Medicine, 1876 to 1839 to 1840.
GUNNING T. BEDFORD, M.D.,.....	Obstetrics,..... [died], 1840 to 1874.
JAMES MCNAUGHTON, M.D.,....	Theory and Practice of Medicine, [died], 1840 to 1841.
LEWIS C. BECK, M.D.,.....	Chemistry and Therapeutics, .. 1841 to 1853
T. ROMEYN BECK, M.D.,.....	Chemistry and Pharmacy, [d.], 1841 to 1853 Materia Medica,..... 1842 to 1853. Emeritus Prof. Materia Medica, [die.], 1853 to 1856.
HOWARD TOWNSEND, M.D.,....	Obstetrics,..... 1853 to 1855. Materia Medica,.... 1855 to 1859. Materia Medica and Physiology,.... [died], 1859 to 1867.
EZRA S. CARR, M.D.,... ..	Chemistry and Pharmacy, ... 1853 to 1857.
JNO. V. P. QUACKENBUSH, M.D.,..	Obstetrics and Diseases Women and Children,.... 1855 to 1856. Midwifery and Diseases Women and Children,..... 1856 to 1859. Obstetrics and Diseases Women and Children,..... 1859 to 1870. Diseases of Women and Children, [died], 1876 to 1876.
CHARLES H. PORTER, M.D.,	Chemistry and Pharmacy,.... 1857 to 1859. Chemistry and Medical Jurisprudence, 1859 to 1864.
GEORGE F. BARKER, M.D.,.....	Acting Prof. Chemistry,..... 1862 to 1863.
JACOB S. MOSHER, M.D., Ph.D.,....	Lecturer on Chemistry,..... 1864 to 1864. Chemistry and Medical Jurisprudence, 1864 to 1870. Medical Jurisprudence and Hygiene, 1876 to 1867 to 1870.
S. OAKLEY VANDER POEL, M.D., LL.D.,	General Pathology and Clinical Medicine, 1876 to
	Theory and Practice and Clinical Medicine,..... 1876 to

JAMES E. POMFRET, M.D.,.....	Lecturer on Anatomy,.....	1861 to 1861.
	Physiology,..... [died],	1867 to 1869.
JOHN V. LANSING, M.D.,.....	Materia Medica,.....	1867 to 1870.
	Physiology and Clinical Medi- cine,.....	1870 to 1873.
	Principles and Practice of Me- dicine and Clinical Medicine,	1873 to 1876.
HENRY R. HASKINS, M.D.,.....	Surgical and Descriptive Ana- tomy,.....	1869 to 1874.
	Anatomy,.....	1874 to 1876.
ALBERT VAN DERVEER, M.D.,.....	General and Special Anatomy, Principles and Practice of Surgery,.....	1869 to 1873. 1876 to 1880.
	Principles and Practice of Sur- gery and Clinical Surgery,...	1880 to
EDMUND R. PEASLEE, M.D.,.....	Diseases of Women,.....	1870 to 1873.
MEREDYTH CLYMER, M.D.,.....	Diseases of the Nervous System and of the Mind,.....	1870 to 1873.
WILLIAM P. SEYMOUR, M.D.,.....	Obstetrics and Diseases of Wo- men and Children,.....	1870 to 1876.
GEORGE T. STEVENS, M.D.,.....	Ophthalmology and Orthopedic Surgery,.....	1870 to 1873.
	Physiology and Ophthalmology, Ophthalmology,.....	1873 to 1875. 1875 to 1876.
JOHN M. BIGELOW, M.D.,.....	Materia Medica,.....	1870 to 1873.
	Materia Medica and Therapeu- tics,.....	1873 to 1873.
	Materia Medica and Therapeu- tics,	1876 to
MAURICE PERKINS, M.D.,.....	Chemistry and Toxicology,....	1870 to 1876.
	Chemical Philosophy and Or- ganic Chemistry,.....	1876 to
IRA HARRIS, LL.D.,.....	Medical Jurisprudence,.....	1874 to 1876.
WILLIS G. TUCKER, M.D.,.....	Asst. Prof. Chemistry,.....	1871 to 1874.
	Lecturer in Materia Medica and Asst. Prof. Chemistry,.....	1874 to 1875.
	Adjunct Prof. Materia Medica and Chemistry,.....	1875 to 1876.
	Inorganic and Analytical Chem- istry,.....	1876 to
WILLIAM HAILES, M.D.,.....	Lecturer Pathological Ana- tomy,.....	1874 to 1875.
	Adjunct Prof. Pathological Anatomy,.....	1875 to 1876.
	Histology and Pathological Anatomy,.....	1876 to
HARRISON E. WEBSTER, A.M.,.....	Lecturer on Physiology,.....	1875 to 1880.
JOHN SWINBURNE, M.D.,.....	Fractures and Dislocations and Clinical Surgery,.....	1876 to 1880.
LEWIS BALCH, M.D.,.....	Anatomy,.....	1876 to
SAM'L B. WARD, M.D.,.....	Surgical Pathology and Opera- tive Surgery,.....	1876 to 1880.
	Surgical Pathology and Opera- tive Surgery and Clinical Surgery,.....	1880 to
JOHN P. GRAY, M.D., LL.D.,.....	Psychological Medicine,.....	1876 to
EDWARD R. HUN, M.D.,.....	Diseases of Nervous System, [d]	1876 to 1880.
JAMES P. BOYD, JR., M.D.,.....	Diseases Women and Children, Obstetrics and Diseases Wo- men and Children,.....	1876 to 1876. 1876 to
CYRUS S. MERRILL, M.D.,.....	Ophthalmology,.....	1876 to
S. O. VANDER POEL, JR., M.D.,...	Adjunct Prof. Theory and Prac- tice and Clinical Medicine,...	1880 to
FRANKLIN TOWNSEND, JR., M.D.,	Lecturer on Physiology,.....	1880 to
FREDERIC C. CURTIS, M.D.,.....	Adjunct Prof. of Dermatology,	1880 to

HOSPITALS.

The following Hospitals, by regulation of their Governing Boards, are made available for clinical purposes to the students:

ALBANY HOSPITAL,

Howard Street, corner of Eagle street.

MEDICAL AND SURGICAL STAFF:

<i>Consulting Physicians:</i>	<i>Eye and Ear Surgeons,</i>
T. BEN, M.D.,	C. A. ROBERTSON, M.D.,
E. G. VANDER POEL, M.D.	C. S. MERRILL, M.D.
<i>Surgeons:</i>	<i>Obstetrician,</i>
A. VAN DERVEER, M.D.,	W. H. BAILEY, M.D.
S. B. WARD, M.D.,	<i>Diseases of Women,</i>
W. H. HAILLIS, M.D.,	J. P. BOYD, JR., M.D.
J. E. MOSHER, M.D.	<i>Nervous Diseases,</i>
<i>Physicians,</i>	E. R. HUN, M.D.
E. H. FURMAN, M.D.,	<i>Diseases of the Skin,</i>
J. LEWIS, M.D.,	F. C. CURTIS, M.D.
J. M. BIGELOW, M.D.,	
E. L. SNOW, M.D.	
<i>Resident Physician and Surgeon,</i>	SHeldon VOORHEES, M.D.
<i>Asst. Resident Physician and Surgeon,</i>	C. F. HUDDLESTONE, M.D.
<i>Junior Asst. Physician and Surgeon,</i>	CLINTON B. HERRICK, M.D.

ST. PETER'S HOSPITAL,

Cor. North Broadway and North Ferry Street.

MEDICAL AND SURGICAL STAFF:

<i>Consulting Physicians,</i>	<i>Ophthalmic, and Aural Surgeons.</i>
T. BEN, M.D.,	C. A. ROBERTSON, M.D.,
E. G. VANDER POEL, M.D.	C. S. MERRILL, M.D.
<i>Consulting Surgeon,</i>	<i>Obstetric Surgeons,</i>
J. SWICKBURN, M.D.	J. P. BOYD, JR., M.D.,
<i>Physicians,</i>	FRANKLIN TOWNSEND, M.D.
E. R. HUN, M.D.,	<i>Asst. Physicians, and Surgeons</i>
J. M. BIGELOW, M.D.	T. M. TREGO, M.D.,
F. C. CURTIS, M.D.,	A. W. KILBOURNE, M.D.
E. G. VANDER POEL, JR., M.D.	<i>Resident Physicians & Surgeons.</i>
<i>Surgeons,</i>	W. F. MCTAMMANY, M.D.
A. VAN DERVEER, M.D.,	T. F. O'GRADY, M.D.
J. BALCH, M.D.,	— McNAMARA, M.D.
S. B. WARD, M.D.,	
J. E. MOSHER, M.D.	

COUNTY HOSPITAL.

Physician and Surgeon, D. V. O'LEARY, M.D.

Resident Physician, FREDERICK T. MORRILL.

EAR AND EYE RELIEF.

Surgeon, C. A. ROBERTSON, M.D.

Assistant Surgeon, W. H. F. REYNOLDS, M.D.

Rhinocapist and Laryngoscopist, F. C. CURTIS, M.D.

Electro-Therapeutist, JNO. BEN. STONEHOUSE, M.D.
